

On a sectoral basis, power generation represents the bulk of emissions, followed by transport.
 On a fuel basis, oil accounts for the largest share, ahead of coal.

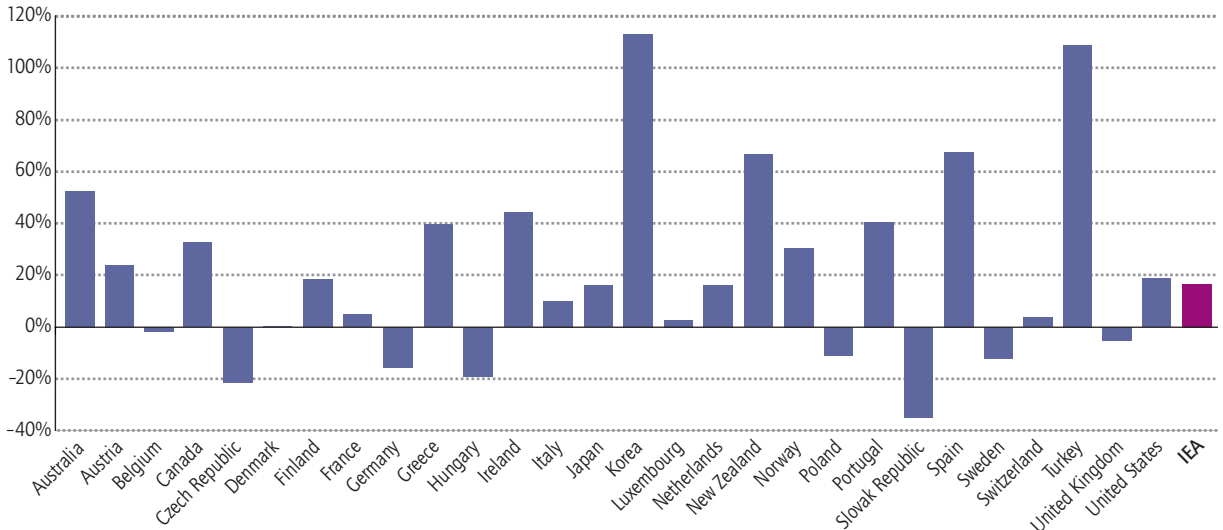

CO₂ emissions by fuel in 2007

CO₂ emissions by sector in 2007

Percentage change in CO₂ emissions between 1990 and 2007

* Other includes industrial waste and non-renewable municipal waste.

** Other includes commercial/public services, agriculture/forestry, fishing and other use not specified elsewhere.
