

Table of Contents

Introduction		6
	Foreword	6
	Executive Summary	8
	Acknowledgements	17
Part 1	Setting the Scene	22
Chapter 1	The Global Outlook	25
	Global modelling results	29
	Changes that alter previous energy projections	31
	Sector development in the future energy system	35
	Investment needs and fuel savings from transforming the energy system	51
	Policy action to lead the transition	53
Chapter 2	Tracking Clean Energy Progress	59
	Tracking Progress: How and Against What?	60
	Renewable Power	64
	Nuclear Power	70
	Natural Gas-Fired Power	72
	Coal-Fired Power	74
	Carbon Capture and Storage	76
	Industry	78
	Chemicals and Petrochemicals	80
	Iron and Steel	82
	Transport	84
	Electric and Hybrid Electric Vehicles	86
	Biofuels	88
	Buildings Energy Efficiency	90
	Building Envelope	92
	Appliances and Equipment	94
	Co-generation and District Heating and Cooling	96
	Smart Grids	98
	Getting "Smart" about Staying on Line	100
	Technology Overview Notes	109

Part 2	Harnessing Electricity's Potential	116
Chapter 3	Electrification of the Energy System	119
	The increasingly essential and evolving role of electricity	122
	Implications for environment, security and economy	124
	Recommended actions for the near term	133
Chapter 4	Solar Power: Possibly the Dominant Source by 2050	137
	Solar technologies in the electricity system: Recent trends	139
	Future role of solar in the global electricity system	147
	Recommended actions for the near term	162
Chapter 5	Natural Gas in Low-Carbon Electricity Systems	167
	Natural gas in the <i>ETP 2014</i> scenarios: A summary	168
	Enabling gas-fired generation technologies to displace coal	179
	Flexible gas-fired generation to support VRE generation	189
	Recommended actions for the near term	200
Chapter 6	Electrifying Transport: How Can E-Mobility Replace Oil?	207
	Electrifying transport modes: Technologies, time frames and opportunities	210
	The LETMIX	224
	The <i>ETP 2014</i> 2DS and 2DS-ET variant	229
	Recommended actions for the near term	233
Chapter 7	Electricity Storage: Costs, Value and Competitiveness	239
	Appeal of storing electricity	240
	Applications for electricity storage	246
	Performance and costs of electricity storage technology	252
	Energy storage for system integration	267
	Grid storage requirements in the 2DS	270
	Recommended actions for the near term	272
Chapter 8	Attracting Finance for Low-Carbon Generation	277
	Attracting financing resources	279
	The two extremes: Regulated utilities and competitive markets	288
	Intermediate solutions to promote low-carbon investments	295
	Recommended actions for the near term	301
Chapter 9	Power Generation in India	305
	India's low-carbon growth strategy	306
	The Indian power sector today	307
	Mid-term goals for the power sector	317
	Coal	318
	Gas	324
	Nuclear	326
	Hydropower	329
	Other renewable energy technologies	330
	Recommended actions for the near term	336

Annexes		340
Annex A	Analytical Approach	341
Annex B	Abbreviations and Acronyms	352
Annex C	Definitions, Regional and Country Groupings and Units	357
Annex D	Lists of Figures, Tables and Boxes	368
