Acknowledgements.....	5
Executive Summary	11
<i>The various aspects of energy security policy.....</i>	12
<i>Measuring resource concentration as a driver of energy security.....</i>	13
<i>Case studies.....</i>	15
<i>Results from the reference scenario</i>	15
<i>Results from the policy cases</i>	17
<i>Conclusion.....</i>	19
1 Premise for an integrated energy policy	21
The role of government in liberalised energy markets	21
Historic energy policy drivers	23
Climate change and energy security interactions	24
Scope and outline.....	25
2 The nature of climate change and energy security policy interactions	27
Climate change and its mitigation	27
Untangling energy security.....	32
Assessing climate change and energy security policy interactions	38
Summary	43
3 New tools to measure the energy security implications of resource concentration	45
Measuring the price component of energy security.....	45
Measuring the physical availability component of energy security.....	59
Summary	62
4 Energy security and climate change policy drivers: a reference scenario	65
Fuel mix.....	66
Carbon dioxide emissions.....	70
Price component of energy security	72
Physical availability component of energy security.....	84
Summary	88

5	Energy security and climate change policy interactions: exploratory policy cases	91
	Policy-induced changes in the electricity sector	92
	Policy-induced changes in road transport	104
	Summary	112
6	Discussion	115
	Methodology	115
	Case study results	116
	Missing pieces	116
7	Annex I: A review of existing quantitative approaches	119
	Measuring diversity	119
	Import dependence	123
	Hybrid approaches	125
	Summary	127
8	Annex II: ESI_{price} calculation input data - Reference scenario analysis, 2004, 2030	129
