

TABLE OF CONTENTS

FOREWORD	5
ACKNOWLEDGEMENTS	7
EXECUTIVE SUMMARY	15
I. RUSSIA'S NATURAL GAS CHAIN: OVERVIEW AND OUTLOOK	25
Natural gas balance: trends, exports and outlook	26
Energy efficiency: a huge potential to tap.	39
GHG emissions in Russia: the natural gas sector and gas flaring	43
II. RUSSIAN CLIMATE POLICY FRAMEWORK	51
Russia in the context of the international climate policy	51
The Kyoto Protocol and Russia: managing the surplus	57
Russian climate policy: strategies and institutions	64
Participation in flexibility mechanisms: Russia's capacity	73
III. GHG EMISSION REDUCTIONS IN THE GAS TRANSMISSION SECTOR	85
The current state of Russia's gas transmission system	86
Sources of GHG emissions in the gas transmission system	92
Main options to reduce GHG emissions	101
IV. REDUCING METHANE EMISSIONS FROM RUSSIA'S GAS DISTRIBUTION NETWORK	115
Current state of Russia's gas distribution system	116
GHG emissions in the gas distribution network	119
GHG emission reduction potential in Russia's gas distribution network	126
V. REDUCING GAS FLARING: OPPORTUNITIES AND CHALLENGES	141
Gas flaring around the world.	141
Estimates of gas flaring in Russia.	146
Impact of carbon finance	158

ANNEXES

1	Calculation of conversion factors	167
2	Main stages of development of Russian climate policy	171
3	Compressor units along Russia's transmission system	173
4	The best-available technology and Gazprom's new compressor units	175
5	CH ₄ emission measurement programmes	177
6	Studies on methane emissions at compressor stations	179
	REFERENCES	181
	USEFUL WEB SITES	191
	GLOSSARY	193

LIST OF MAPS

1	Major natural gas producing and prospective regions and pipelines	30
2	Satellite image of West Siberia	153

LIST OF FIGURES

ES-1	Estimated GHG emissions in 2004 and potential for reductions in Russia's natural gas sector and gas flaring	22
1	Gazprom reserve replacement	28
2	Russian gas supply outlook.	34
3	Russian gas demand by sector 1992-2004	36
4	The structure of Russia's gas distribution sector	38
5	Projections of Russian energy intensity to 2020	40
6	Historic and outlook for Russian domestic gas pricing	42
7	Gazprom energy consumption by sub-sector in 2000	44
8	Estimated structure of GHG emissions from Russian gas transmission and distribution systems and gas flaring in 2004	47
9	World energy-related CO ₂ emissions in 2003, by country (25.2 GtCO ₂).	51

10	Russian GDP, energy consumption and CO ₂ emissions, 1990-2004.	53
11	Sectoral structure of Russian CO ₂ emissions from energy combustion.	54
12	Projections of CO ₂ emissions in Russia relative to 1990 levels	56
13	Existing and proposed mechanisms for international emissions transactions under the Kyoto Protocol.	57
14	Additionality tool of CDM projects	79
15	Accidents at transmission pipelines, 1991 to 2000.	87
16	Funds allocated and actually invested over Gazprom's five-year Reconstruction Programmes from 1991 to 2006	89
17	Gazprom investment in the reconstruction and overhaul of the transmission system, 2000-04.	89
18	Implementation of Gazprom's pipeline flaw detection programme, 1993-2004	90
19	Illustration of the functioning of a natural gas compressor unit.	92
20	IRR for compressor unit replacement investments at domestic and export gas prices (business-as-usual)	112
21	The general schematic of natural gas distribution networks	116
22	Estimated costs of methane emission reduction options in the Kursk region	132
23	Estimated pay-back time for methane emission reduction options in the Kursk region	133
24	Sensitivity of methane emission reduction options to transaction costs	135
25	The economics of alternatives for associated gas use	144
26	Share of gas flared at Tomskneft due to Gazprom network limitations	149
27	Impact of the associated gas price and carbon revenue on the IRR of pipeline transport projects.	161
28	Emission factors for associated gas flaring for different combustion efficiencies	169

LIST OF TABLES

ES-1	Estimated GHG emissions: Russia's natural gas sector and gas flaring in 2004.	17
1	Russian gas production by oil companies and independents in 2003-05	33
2	Gazprom's estimates of its GHG emissions from 1990 to 2000 and projections to 2012	44
3	Gazprom's potential GHG emission reductions in 2000-12	45
4	Russia's estimated total GHG emissions	52
5	Russian projections of economic growth and CO ₂ emissions for 2000-12	55
6	Russia's estimated surplus of Assigned Amount Units in 2010	57
7	Energy sector related actions listed in the Action Plan	66
8	Russian deadlines to fulfil eligibility requirements for participation in the Kyoto Protocol flexibility mechanisms and in alternative schemes	67
9	Development of Russia's Unified Gas Supply System (UGSS)	86
10	Age structure of Gazprom's transmission pipelines	87
11	Hours of operation of Gazprom's compressor units	91
12	Gas consumption by Gazprom's gas transmission system, 1997-2004	93
13	Estimates of methane emissions by Russian compressor stations	98
14	Estimates of GHG emissions along Russia's gas transmission system in 2004	100
15	Classification of fugitive CH ₄ emissions along transmission pipelines and at compressor stations	101
16	Gazprom's expected reductions in GHG emissions in the transmission system, 2001 vs 2012	102
17	Gazprom's outlook for improvements in its stock of gas-driven compressors	107
18	Natural Gas STAR Method of Directed Inspection and Maintenance (DI&M) at compressor stations	109
19	Comparison of wet and dry oil seals	109
20	Assumptions used to evaluate compressor replacement projects	110

21	Expansion of the gas distribution system from 1995 to 2004	117
22	Accidents along Russia's gas distribution network from 2003 to July 2005 . . .	118
23	Rates of CH ₄ leaks along underground distribution pipelines in the Unites States, 1992	121
24	Emission factors for gas distribution and pressure-regulating stations in the United States, 1992	122
25	Methane emission reductions of a Canadian gas distribution company, 1990 vs 2001	122
26	Estimates of methane emissions in Kaliningrad and extrapolation across Russia	123
27	Estimates of methane emissions along Russia's gas distribution system.	126
28	Options to reduce methane emissions along the Kursk regional gas distribution network	130
29	Produced and flared associated gas, by oil company, in 2005	147
30	Production at Yuganskneftegas fields, 1999 vs 2004	147
31	Yukos associated gas flaring and utilisation and its dependence on Sibur.	148
32	Compliance with licence requirements on rates of associated gas utilisation in the Khanti-Mansiysk region	155
33	GGFR Voluntary Standard options for governments	156
34	Additionality demonstration tools for gas flaring reduction projects	165
35	Historic timeline of Russian climate policy	171
36	Structure of the stock of Russia's compressor units in January 2000.	173
37	The best-available compressor turbines with capacities from 4 to 31 MW.	175
38	Gazprom's new generation of compressor units (compressors and drives).	176
39	Methane emissions from Volgotransgaz pipelines in 1997	178
40	Export gas pipelines surveyed by the Wuppertal Institute in 2003	178
41	Estimates of methane emissions at Russian compressor stations	179

LIST OF BOXES

1	Joint implementation (JI): two tracks	59
2	Green investment scheme (GIS).	60
3	The system of fees for pollutant emissions in Russian environmental policy. . .	70
4	Additionality demonstration for CDM projects.	78
5	Compressor stations along gas transmission pipelines.	92
6	TransCanada's gas transmission system	108
7	The Kaliningrad pilot project to provide "Support for the Russian gas industry to participate in Kyoto mechanisms"	124
8	Measures to reduce fugitive methane emissions in Canada's gas distribution network	127
9	"Cost-plus formula" for tariffs in gas distribution in Russia	137
10	Global Gas Flaring Reduction Public-Private Partnership.	142
11	Sibur associated gas processing activities	148
12	Tomsk gas flaring reduction project	150
13	The Rang Dong project of recovery and utilisation of associated gas	164
