	FOREWORD	3
	ACKNOWLEDGEMENTS	5
	LIST OF FIGURES AND BOXES	8
	LIST OF TABLES	8
	EXECUTIVE SUMMARY	13
	<i>Background and approach</i>	13
	<i>Summary of results</i>	18
	<i>Conclusions and recommendations</i>	27
1.	INTRODUCTION	29
	<i>Previous fuel crises: what can be learned?</i>	32
	<i>Previous emergency planning efforts</i>	38
2.	ANALYSIS OF POTENTIAL POLICIES AND MEASURES	43
	<i>Transport demand restraint policies: overview and methodologies</i>	43
	<i>Pricing and taxation-related policies</i>	46
	<i>Provision and promotion of alternative modes</i>	54
	<i>Non-motorised travel and land use</i>	75
	<i>Work-trip reduction policies</i>	79
	<i>Regulatory approaches to traffic reduction</i>	89
	<i>Vehicle speed-reduction policies</i>	96
	<i>Promotion of "ecodriving"</i>	107
	<i>Alternative fuels</i>	113
	<i>Chapter summary</i>	114

3.	IMPLEMENTATION COST AND COST-EFFECTIVENESS OF VARIOUS POLICY OPTIONS	119
	<i>General considerations</i>	119
	<i>Cost-effectiveness estimates by policy type</i>	121
	<i>Summary of cost-effectiveness results</i>	128
4.	CONCLUSIONS	131
	APPENDIX: DATA SOURCES AND CALCULATIONS FOR ESTIMATES IN THIS REPORT	135
	ABBREVIATIONS	157
	REFERENCES	159

LIST OF FIGURES

Figure E-1	Percentage reduction in total petroleum fuel use by IEA region, for selected measures	23
Figure 1-1	Effects of increasing elasticity of demand response	31

LIST OF BOXES

Demand response measures: an economic perspective	31
Demand restraint as an emergency response measure	35
Energy emergency plan for Greece	41

LIST OF TABLES

Table E-1	Summary of oil-saving effects of measures summed across all IEA countries	19
Table E-2	Summary of implementation cost-effectiveness of various measures	25
Table 2-1	Estimated effects of transport demand management	44

Table 2-2	Potential fuel savings from transport demand management	45
Table 2-3	Key results from TRACE project	48
Table 2-4	Modelled estimates of pricing measure impacts	49
Table 2-5	Effect of a 50% increase in fuel price on demand under different conditions	51
Table 2-6	Survey of public transit travel elasticities in four European countries	56
Table 2-7	Change in public transit use due to employer-provided public transit benefits	57
Table 2-8	Elasticity assumptions and impacts for public transit measures	62
Table 2-9	Estimated impacts of a 50% reduction in transit fares	63
Table 2-10	Estimated fuel savings from public transit measures: summary results	64
Table 2-11	Impacts of adding one person to every urban-area car trip	71
Table 2-12	Estimated car-pooling impacts under different circumstances	72
Table 2-13	Consensus estimates of fuel savings from car-pooling	73
Table 2-14	Estimated impacts of closure of 2% of urban road space	78
Table 2-15	Projections of telecommuters and telecommuting miles	81
Table 2-16	Input values and estimation of maximum VKT savings from telecommuting	83
Table 2-17	Potential fuel savings from telecommuting	84
Table 2-18	Consensus estimate of effect of telecommuting measure	86
Table 2-19	Results for compressed work week measure: 4 days/40 hours	88
Table 2-20	Results for compressed work week measure: 9 days/80 hours	88
Table 2-21	Consensus estimates for 4/40 compressed work week measure	90
Table 2-22	Assumptions used in DIW study for Germany	92
Table 2-23	Distribution of vehicle ownership by household	94
Table 2-24	Estimate of VKT reduction and offsets with odd/even day ban	95
Table 2-25	Estimate of VKT reduction and offsets with one-in-ten-day driving ban	95
Table 2-26	Estimate of fuel savings for odd/even day driving ban	96
Table 2-27	Estimate of fuel savings for one-day-in-ten driving ban	97

Table 2-28	Consensus estimates of fuel savings from odd/even day and one-day-in-ten driving ban policies	97
Table 2-29	Vehicle speed impacts on fuel economy	99
Table 2-30	Fuel economy estimates for different driving cycles	99
Table 2-31	Comparison of US, European and Japanese driving cycles	100
Table 2-32	Vehicle characteristics and illustrative results of fuel consumption equation	103
Table 2-33	Results of steady state speed reduction	104
Table 2-34	Estimate of fuel savings for speed reductions	105
Table 2-35	Consensus estimate of effect of reducing speed limit to 90 km/hr	106
Table 2-36	Percentage under-inflation of tyres based on survey	109
Table 2-37	Estimated benefits from tyre inflation campaigns	111
Table 2-38	Estimates of fuel savings from tyre inflation campaigns	112
Table 2-39	Fuel efficiency improvements from low-viscosity oils	112
Table 2-40	Consensus estimates for comprehensive ecodriving campaigns	113
Table 2-41	Summary of effects of policies across all IEA countries	115
Table 2-42	Estimated fuel savings for each IEA region	116
Table 3-1	Assumed costs of a public information campaign by region	120
Table 3-2	Public transit cost data	121
Table 3-3	Public transit policy cost-effectiveness	123
Table 3-4	Car-pool policy cost-effectiveness	124
Table 3-5	Work-trip reduction policy cost-effectiveness	125
Table 3-6	Driving ban policy cost-effectiveness	126
Table 3-7	Speed reduction policy cost-effectiveness	127
Table 3-8	Ecodriving campaign cost-effectiveness	128
Table A-1	Total fuel consumption for each country, 2001 data	136
Table A-2	Total petroleum fuel consumption for each region and total for all regions, 2001 data	136
Table A-3	Vehicle travel estimates from IRTAD	137
Table A-4	Average fuel intensity for each region	138
Table A-5	IEA cities in the Millennium Database	139

Table A-6	Population normalisation factors applied to sample Millennium cities	140
Table A-7	Data on Millennium cities' public transit use, 1997	141
Table A-8	Population normalisation factors applied to sample Millennium cities	143
Table A-9	Estimates of average vehicle occupancy rates	144
Table A-10	Effectiveness of public transit measures: trips diverted from private vehicles	145
Table A-11	Effectiveness of public transit measures: summary results	146
Table A-12	Nested logit model coefficients from McDonald and Noland (2001)	147
Table A-13	Car-pooling – impacts of adding one person to every car trip	148
Table A-14	Car-pooling – impacts of adding one person to every car trip on urban area motorways	149
Table A-15	Car-pooling – impacts of adding one person to every commute trip	150
Table A-16	Car-pooling – impacts of a 10% reduction in motorway VKT due to increased car-pooling	151
Table A-17	European speed data	152
Table A-18	Percentage fuel consumption savings from reduction in steady state speed	155
Table A-19	Reductions in fuel consumption from tyre inflation campaign	156
