

Table of Contents

Foreword	1
Acknowledgements	2
Executive Summary	4
Section 1 • Background	5
Section 2 • CHP Technologies and Applications	10
Section 3 • Global CHP Status, Potential for Benefits in an Accelerated Scenario	17
Section 4 • Next Steps	27
References	28
Annex 1 • CHP Potential Modelling - Summary of Methodology and Assumptions	30

List of Tables

Table 1. CHP applications	12
Table 2. Installed CHP capacities	18

List of Figures

Figure 1. <i>World Energy Outlook</i> : Global energy-related CO ₂ emissions	5
Figure 2. European Union energy demand in 2005	6
Figure 3. Energy flows in the global electricity system	6
Figure 4. European GHG emissions reductions shares between 1990-2005 from different policy strategies	8
Figure 5. CHP share of total national power production	8
Figure 6. CHP/DHC growth and energy end-use carbon emissions in Denmark, 1990 - 2006	9
Figure 7. Efficiency gains of CHP: one example	10
Figure 8. The diversity of resources used by district heating and cooling systems	15
Figure 9. G8+5 countries: CHP as a share of electricity generation	18
Figure 10. G8+5 countries: CHP potentials under an accelerated CHP scenario, 2015 and 2030	20
Figure 11. Current and projected CHP capacities under an accelerated CHP scenario, 2015 and 2030	21
Figure 12. G8+5: CHP share of electricity generation in 2015 and 2030 under the accelerated CHP scenario	22
Figure 13. Cumulative global power sector capital costs, 2005-2015 and 2005-2030	23
Figure 14. Accelerated CHP capital cost savings as a share of total power sector investment, 2005 - 2030	24
Figure 15. Delivered electricity costs, 2015 and 2030	24
Figure 16. Carbon dioxide emissions, 2015 and 2030	25
Figure 17. Contribution of CHP to a 450 ppm stabilisation scenario	26
