	<b>Industry</b> .....	<b>99</b>

<b>Chapter 3</b>	<b>Technology Strategies for a More Sustainable Energy Future</b>	<b>105</b>
	<b>Introduction</b>	<b>106</b>
	<b>Barriers to technology uptake</b>	<b>106</b>
	<b>Overcoming barriers</b>	<b>112</b>
	<b>Power generation from fossil fuels</b>	<b>114</b>
	Natural gas combined-cycle	116
	Supercritical steam cycle (SCSC) and ultra supercritical steam cycle (USCSC)	118
	Integrated gasification combined-cycle (IGCC)	119
	Fluidised bed combustion (FBC and PFBC)	120
	CO <sub>2</sub> capture and storage technologies (CCS)	121
	<b>Power generation from renewables</b>	<b>122</b>
	Hydropower	124
	Geothermal	126
	Bioenergy	127
	Wind energy	128
	Solar	129
	Ocean Energy	131
	<b>Nuclear power generation</b>	<b>132</b>
	Nuclear fission: Generation III and Generation III+	133
	Nuclear fission: Generation IV	135
	<b>Transport</b>	<b>135</b>
	Incremental improvements in the fuel-economy of vehicles (engine and non-engine components)	137
	Hybrid vehicles	138
	Grain and sugar-based ethanol	140
	Ethanol (lignocellulosic)	141
	Biodiesel	142
	Hydrogen fuel cell vehicles	143
	<b>Buildings and appliances</b>	<b>144</b>
	Building envelope measures	146
	Heating and cooling technologies	148
	District heating and cooling systems	149
	Building energy-management systems	150

Lighting systems	151
Electric appliances	153
Reducing stand-by losses	155
Solar heating and cooling	155
Biomass for heating and cooking	156
<b>Industry</b> .....	<b>157</b>
Cogeneration technologies	159
Motor systems	160
Steam systems	161
Enhanced efficiency based on existing technologies for basic materials production	162
Enhanced efficiency based on process innovation for basic materials production	163
Fuel substitution in basic materials production	164
Materials and product efficiency	164
Feedstock substitution	165
CO <sub>2</sub> capture and storage in industry	166

## **PART 2**

### **Energy Technology Status and Outlook**

<b>Chapter 4</b>	<b>Electricity Generation</b>	<b>169</b>
	.....	
	<b>Overview</b> .....	<b>170</b>
	<b>Global electricity generation and CO<sub>2</sub> emissions</b> .....	<b>171</b>
	<b>Challenges for electricity generation technologies</b> .....	<b>174</b>
	<b>Fossil fuel-fired power plants: status and prospects</b> .....	<b>175</b>
	Overview	175
	Status of natural gas and coal-fired electricity generation	176
	Efficiency of natural gas and coal-fired plants	178
	Age of coal-fired plants	182
	Prospects for fossil fuel-fired power plants	183
	<b>CO<sub>2</sub> capture and storage: status and prospects</b> .....	<b>194</b>
	Status of CO <sub>2</sub> capture and storage	194
	Prospects for CO <sub>2</sub> capture technologies	197

	<b>Renewable energy: status and prospects</b> . . . . .	<b>206</b>
	Status of electricity generation from renewable energy	206
	Prospects for electricity generation from renewable energy	208
	<b>Nuclear electricity generation: status and prospects</b> . . . . .	<b>233</b>
	Status of nuclear power	233
	Prospects for nuclear power plants	238
	Prospects for nuclear fusion	245
	<b>Electricity networks and distributed generation: status and prospects</b> . . . . .	<b>247</b>
	Advanced electricity networks	247
	Distributed generation systems	249
<b>Chapter 5</b>	<b>Road Transport Technologies and Fuels</b> . . . . .	<b>253</b>
	<b>Overview</b> . . . . .	<b>254</b>
	Transport activity	255
	Modal mix	256
	Fuel mix	257
	Energy intensity	258
	Greenhouse gas characteristics of transport fuels	261
	Pollutant emissions	261
	<b>Road transport fuel options</b> . . . . .	<b>262</b>
	Conventional oil refining	263
	Non-conventional oil: extraction and upgrading	265
	Fischer-Tropsch Synthesis from natural gas: gas-to-liquids	267
	Fischer-Tropsch Synthesis from coal: coal-to-liquids	269
	Methanol and dimethyl ether	272
	Ethanol	274
	Biodiesel and other biofuels	283
	Hydrogen production	291
	<b>Vehicle technologies for road transport</b> . . . . .	<b>292</b>
	Common technologies for spark-ignition and compression-ignition engines	293
	Gasoline-fuelled and related vehicles	295
	Diesel vehicle technologies	307
	Other alternative-fuelled vehicles	312
	Non-engine technologies	323

Chapter 6	<b>Buildings and Appliances</b>	<b>329</b>
	<b>Overview</b>	<b>330</b>
	<b>Energy consumption in buildings</b>	<b>331</b>
	<b>Overview of building and appliance technologies</b>	<b>334</b>
	Technology integration: towards zero energy buildings	335
	<b>Building envelope</b>	<b>338</b>
	<b>Heating, cooling and ventilation</b>	<b>345</b>
	Conventional heating systems: oil, natural gas, electricity	345
	Advanced heating systems: heat pumps	347
	Advanced heating and cooling systems: active solar	348
	Advanced heating and cooling systems: district heating and cooling	350
	Advanced heating and cooling systems: thermal energy storage	352
	Advanced heating systems: wood heating	354
	Passive solar	355
	Air conditioning	357
	Ventilation	359
	<b>Lighting</b>	<b>360</b>
	<b>Appliances</b>	<b>365</b>
	Cold appliances: refrigerators and freezers	365
	Wet appliances: washing machines	366
	Wet appliances: clothes dryers	368
	Wet appliances: dishwashers	369
	Cooking	370
	Domestic hot water heating: conventional fuels	372
	Hot water heating: solar	374
	Home consumer products: televisions	375
	Office equipment: computers and printers	376
	<b>Micro-generation systems</b>	<b>377</b>
	Solar photovoltaics	377
	Micro wind turbines	379
	Micro combined heat and power	380
	Fuel cells	381
	<b>Miscellaneous technologies</b>	<b>382</b>
	Energy management systems and controls	382
	Meters and metering	383

Chapter	<b>Z</b>	<b>Industry</b>	<b>385</b>
		.....	
		<b>Overview</b> .....	<b>386</b>
		<b>Industrial energy use and CO<sub>2</sub> emissions</b> .....	<b>388</b>
		<b>Iron and steel</b> .....	<b>391</b>
		Injection of pulverised coal and plastic waste	400
		Smelt reduction	403
		Direct casting	404
		<b>Non-metallic minerals</b> .....	<b>405</b>
		Higher energy efficiency using existing cement-kiln technology	406
		CO <sub>2</sub> capture and storage	410
		<b>Chemicals and Petrochemicals</b> .....	<b>411</b>
		Petrochemicals	412
		Inorganic chemicals	418
		<b>Paper and pulp</b> .....	<b>422</b>
		Black-liquor gasification	425
		Efficient drying in paper machines	426
		<b>Non-ferrous metals</b> .....	<b>428</b>
		Inert anodes	430
		<b>General equipment and recycling</b> .....	<b>431</b>
		Steam supply	431
		Combined heat and power	432
		CO <sub>2</sub> capture from combustion installations	437
		Electric motor-drive systems	437
		Increased recycling	444

## LIST OF FIGURES

### Chapter 2 Scenarios to 2050: Energy Demand, Supply and CO<sub>2</sub> Emissions

2.1	Global CO <sub>2</sub> emissions in the Baseline Scenario, ACT scenarios and TECH Plus scenario	46
2.2	CO <sub>2</sub> emission reductions by contributing factor in the ACT and TECH Plus scenarios	47
2.3	Reduction in CO <sub>2</sub> emissions in the Map scenario by technology area	48
2.4	CO <sub>2</sub> emissions by region in the Baseline and Map scenarios	53
2.5	Changes in final energy consumption per unit of GDP, by region, for the Baseline, Map and Low Efficiency scenarios, 2003-2050	54
2.6	Changes in CO <sub>2</sub> emissions and GDP in the Baseline, Map, No CCS and Low Efficiency scenarios, 2003-2050	56
2.7	Growth in CO <sub>2</sub> emissions and GDP in the Baseline and Map scenarios by region, 2003-2050	57
2.8	Estimated marginal emissions abatement cost by scenario, 2050	61
2.9	World total primary energy supply by fuel in the Baseline Scenario	63
2.10	Primary energy use share by region in the Baseline Scenario	64
2.11	World fossil-fuel supply by scenario	65
2.12	World coal supply by scenario, 2003-2050	66
2.13	Changes in world coal demand by region in the Baseline, Map and No CCS scenarios, 2003-2050	67
2.14	World liquid fuel and hydrogen supply by scenario, 2003, 2030 and 2050	69
2.15	Reduction in oil demand by sector in the Map scenario, 2050	70
2.16	Share of world primary oil demand in OECD and non-OECD countries by scenario, 2003-2050	70
2.17	World gas supply by scenario, 2003-2050	71
2.18	Share of world gas demand by region, 2003-2050	72
2.19	Electricity demand growth by sector (2003-2050) and share of demand by sector (2003, 2030, 2050) in the Baseline Scenario	73
2.20	Electricity demand in the Baseline, Map and Low Efficiency scenarios, 2003, 2030 and 2050	74
2.21	Energy use by sector in the Baseline Scenario	75

2.22	Global electricity production by fuel and scenario, 2003, 2030 and 2050	79
2.23	Growth in electricity production by fuel and scenario, 2003-2050	79
2.24	World nuclear energy use by scenario, 2003-2050	81
2.25	Electricity generation by fuel in the Map scenario in OECD and non-OECD regions, 2050	84
2.26	CO <sub>2</sub> emissions from electricity generation and source of reduction, 2003-2050	85
2.27	CO <sub>2</sub> intensity of electricity production by scenario, 2003 and 2050	86
2.28	CO <sub>2</sub> intensity of coal-fired electricity production in China, 2003-2050	87
2.29	Transport energy use in the Baseline, ACT and TECH Plus scenarios, 2003-2050	88
2.30	Global use of hydrogen and biofuels by scenario, 2003-2050	88
2.31	CO <sub>2</sub> emissions in the transport sector in the Baseline, ACT Map and TECH Plus scenarios, 2003-2050	89
2.32	Well-to-wheel CO <sub>2</sub> emissions by fuel source in the transport sector, 2003	90
2.33	Fuel intensity of new light-duty vehicles and stock	91
2.34	Contribution to the LDV energy efficiency in the Map scenario	92
2.35	Global buildings sector energy consumption in the Baseline and Map scenarios	93
2.36	Energy consumption per household in the Baseline and Map scenarios, 2050	96
2.37	Buildings sector energy savings in the Map scenario by end-use, 2050	97
2.38	Service sector electricity savings in the Map scenario by region, 2050	98
2.39	Building sector CO <sub>2</sub> emissions by source and by scenario, 2003-2050	98
2.40	Industrial energy use in the Baseline Scenario	99
2.41	Industrial CO <sub>2</sub> emissions in the Baseline and Map scenarios, 2003 and 2050	102
2.42	Industrial CO <sub>2</sub> emission reductions in the Map scenario by 2050 compared to the Baseline Scenario	102
2.43	CO <sub>2</sub> emissions reduction in the Map scenario in the OECD and non-OECD, 2050	104

## Chapter 3 Technology Strategies for a More Sustainable Energy Future

3.1	Stages in technology development	108
3.2	Transition through technology stages towards cost-competitiveness in the ACT scenarios	113
3.3	Share of fossil power generation technologies in global CO <sub>2</sub> emission reductions relative to Baseline in the Map and No CCS scenarios, 2050	115
3.4	Pathways towards cost-competitiveness for fossil power generation technologies	116
3.5	Share of renewable generation technologies in global CO <sub>2</sub> emission reductions relative to Baseline for ACT Map and ACT No CCS scenarios, 2050	123
3.6	Pathways towards cost-competitiveness for renewable power generation technologies	124
3.7	Share of nuclear power generation in global CO <sub>2</sub> emission reductions relative to Baseline for ACT Map and ACT No CCS scenarios, 2050	132
3.8	Pathways towards cost-competitiveness for nuclear power generation technologies	133
3.9	Share of road transport in global CO <sub>2</sub> emission reductions relative to Baseline in the Map and TECH Plus scenarios, 2050	136
3.10	Pathways towards cost-competitiveness for transport technologies	137
3.11	Share of buildings and appliances in global CO <sub>2</sub> emission reductions relative to Baseline in the Map scenario, 2050	144
3.12	Pathways towards cost-competitiveness for building and appliance technologies	145
3.13	Share of industry in global CO <sub>2</sub> emission reductions relative to Baseline in the Map scenario, 2050	158
3.14	Pathways towards cost-competitiveness for industrial technologies	159

## Chapter 4 Electricity Generation

4.1	Costs of natural gas and coal-fired power plants	178
4.2	Global average power plant efficiencies, 1992-2003	179
4.3	CO <sub>2</sub> emissions by type of plant	182
4.4	Age distribution of coal-fired capacity by size in the United States	184

4.5	Age distribution of coal-fired capacity by size in China	184
4.6	Age distribution of coal-fired capacity by size in Germany	184
4.7	Age distribution of coal-fired capacity by size in Japan	185
4.8	Age distribution of coal-fired capacity by size in the United Kingdom	185
4.9	Age distribution of coal-fired capacity by size in India	185
4.10	CO <sub>2</sub> capture, transport and storage concept	195
4.11	Development of wind turbine size	220
4.12	Projected cost reductions for solar PV	224
4.13	Nuclear reactor development by decade, 1950 to 2000	233
4.14	Nuclear share in electricity production, 2003	235

## Chapter 5 Road Transport Technologies and Fuels

5.1	Total final consumption in transport, 2003	254
5.2	Average fuel intensity of the light-duty vehicle stock	259
5.3	Average fuel intensity of light-duty vehicle sales	260
5.4	Alternative fuel options and their contribution to supply security and CO <sub>2</sub> reduction	263
5.5	Stranded natural gas resources by region	269
5.6	Ethanol supply curves	283
5.7	Biodiesel supply curves	288
5.8	Key crops: average yields per hectare, 1961-2004	290
5.9	Turbocharger	294
5.10	Mild hybrid engine	315
5.11	Full hybrid vehicle configuration	315
5.12	Proton exchange membrane fuel cell concept	321
5.13	Vehicle aerodynamics	326

## Chapter 6 Buildings and Appliances

6.1	OECD final energy consumption for commercial and residential buildings, 1973-2003	331
6.2	Shares of final energy consumption for commercial and residential buildings in OECD, 2003	332
6.3	Shares of final energy use by end-use in residential buildings IEA-11	333

6.4	Residential electricity end-uses IEA-11, 1973-1998	333
6.5	Zero energy buildings	337
6.6	Savings potential of windows for heating energy costs: typical house in Boston, Massachusetts, United States	340
6.7	Savings potential of windows for cooling energy costs: typical house in Phoenix, Arizona, United States	341
6.8	Energy efficient windows market share for low-energy glazing	342
6.9	Residential space heating in Denmark	344
6.10	Condensing gas boiler market penetration in Denmark	346
6.11	System efficacy of light sources for general lighting	362
6.12	Evolution of luminous efficacy of major light sources used for general lighting	363
6.13	Price evolution of solar PV modules and systems in selected countries, 1992-2003	378
6.14	Stirling engine	380

## Chapter **Z** **Industry**

7.1	The development path of industrial technologies	387
7.2	Final energy use by industry, 1971 and 2003	390
7.3	Industrial CO <sub>2</sub> emissions by sector, 2003	391
7.4	Global steel production by process, 1970 and 2004	393
7.5	Global direct reduced iron production, 1970-2004	395
7.6	CO <sub>2</sub> emissions per unit of product	396
7.7	Coal and coke use in blast furnaces, 2003	397
7.8	Fuel rates of Chinese blast furnaces compared with advanced furnaces	397
7.9	Distribution of energy use in pig-iron production as a function of iron-production volume, 2003	399
7.10	Average CO <sub>2</sub> emissions per tonne of cement by country and region	406
7.11	Energy efficiency of various cement-clinker production technologies	407
7.12	Global cogeneration trends, 1992-2003	433

## Annex **A** **IEA Energy Technology Collaboration Programme**

A.1	Countries Participating in the IEA ETCP	447

## LIST OF TABLES

### Chapter 2 Scenarios to 2050: Energy Demand, Supply and CO<sub>2</sub> Emissions

2.1	Overview of scenario assumptions for ACT and TECH Plus scenarios	43
2.2	Reduction in CO <sub>2</sub> emissions below the Baseline in the ACT and TECH Plus scenarios by contributing factor, 2050	51
2.3	Electricity generation shares in the Baseline, ACT and TECH Plus scenarios, 2050	52
2.4	CO <sub>2</sub> emissions by region in the Baseline, Map and No CCS scenarios, 2003 and 2050	53
2.5	Cumulative increase in power generation investment in the Map scenario, 2005-2050	59
2.6	Changes in primary energy supply by fuel in the Map, No CCS and TECH Plus scenarios, 2050	65
2.7	World energy consumption by sector and scenario	76
2.8	Reduction in final energy consumption below the Baseline Scenario by region in the Map scenario in 2050	77
2.9	CO <sub>2</sub> emissions by sector and by scenario, 2003 and 2050	78
2.10	Global electricity production (2050) and share of increased output (2003 to 2050) by type and scenario	82
2.11	Global energy consumption in the buildings sector in the Baseline scenario	94
2.12	Reduction in global buildings energy consumption in the Map scenario	95
2.13	Industrial energy consumption and savings in the Map scenario, 2050	100

### Chapter 3 Technology Strategies for a More Sustainable Energy Future

3.1	The main barriers faced by key technologies in the ACT and TECH Plus scenarios and policy instruments to overcome them	111
3.2	CO <sub>2</sub> emission reductions in the ACT scenarios below the Baseline due to fossil power generation technologies	116
3.3	CO <sub>2</sub> emission reductions in the ACT scenarios below the Baseline due to renewable power generation technologies	124

3.4	CO <sub>2</sub> emission reductions in the ACT and TECH Plus scenarios below the Baseline due to nuclear power generation technologies	133
3.5	CO <sub>2</sub> emission reductions in the Map and TECH Plus scenarios below the Baseline due to transport technologies	136
3.6	CO <sub>2</sub> emission reductions in the Map scenario below the Baseline due to building and appliance technologies	145
3.7	CO <sub>2</sub> emission reductions in the Map scenarios below the Baseline due to industrial technologies	158

## Chapter 4 Electricity Generation

4.1	Global electricity generation	172
4.2	CO <sub>2</sub> emissions from electricity generation	174
4.3	Shares of coal and natural gas in power generation, 2003	177
4.4	Current capacity of natural gas and coal-fired power plants world wide, 2003	177
4.5	Evolution of the net electric efficiency of natural gas and hard-coal plants	179
4.6	Technology prospects for fossil-fuel power plants for baseload capacity	194
4.7	Characteristics of power plants with CO <sub>2</sub> capture	205
4.8	Share of renewable energy in electricity generation, 2003	206
4.9	Global electricity generation from renewables	207
4.10	Efficiencies and costs of European biomass plants	213
4.11	Technology needs for hydropower	216
4.12	Status of ocean renewable energy technologies	229
4.13	Key cost and investment assumptions for renewables	232
4.14	Nuclear reactors by type	236
4.15	World uranium and thorium resources	237
4.16	Years of resource availability for various nuclear reactors	237
4.17	Examples of innovative reactor designs under development	239
4.18	Characteristics of Stirling engines and ICE CHP systems	250

## Chapter 5 Road Transport Technologies and Fuels

5.1	Growth rates in ethanol production from sugar cane	281
5.2	Gasoline vehicle technologies, status and prospects	297
5.3	Vehicles with ethanol dedicated engines, status and prospects	300

5.4	Flexible fuel vehicles, status and prospects	301
5.5	Diesel vehicles, status and prospects	309
5.6	Gasoline hybrids, status and prospects	318
5.7	Diesel hybrids, status and prospects	319

## Chapter 7 Industry

7.1	Final energy use for basic materials production, 2003	389
7.2	Actual energy use and practical minimum use of key processes in iron and steel making	394
7.3	Global technology prospects for coal injection	401
7.4	Global technology prospects for plastic waste injection	402
7.5	Global technology prospects for CO <sub>2</sub> capture in blast furnaces and DRI plants	402
7.6	Global technology prospects for smelt reduction	404
7.7	Global technology prospects for direct casting	405
7.8	Cement technologies and fuel mix by region	407
7.9	Global technology prospects for kiln improvements	408
7.10	Composition of different cement types	409
7.11	Global technology prospects for blended cement and geopolymers	410
7.12	Global technology prospects for CO <sub>2</sub> capture and storage	411
7.13	Ultimate yields of steam crackers with various feedstocks	413
7.14	Energy and CO <sub>2</sub> savings from bio-based polymers	417
7.15	Global technology outlook for biomass feedstocks and biopolymers	418
7.16	Energy consumption in ammonia production, 2003	418
7.17	Ammonia energy-saving potential of retrofitting gas-fuelled steam-reforming plants	419
7.18	Energy efficiency of chlorine production processes	420
7.19	Global technology prospects for membranes	422
7.20	Typical energy use for pulp and paper production	423
7.21	Energy consumption in pulp and paper production	424
7.22	Global technology prospects for black liquor gasification	426
7.23	Global technology prospects for energy efficient drying technologies	428

7.24	Regional average energy use of metallurgical alumina production, 2004	429
7.25	Regional average electricity use for primary aluminium production, 2004	430
7.26	Global technology prospects for inert anodes and bipolar cell design in primary aluminium production	431
7.27	Steam system efficiency measures	432
7.28	Comparison of conventional and fuel-cell CHP systems	436
7.29	Global technology prospects for CHP systems	437
7.30	Global technology prospects for CO <sub>2</sub> capture from combustion installations	437
7.31	Cost estimates for emerging motor technologies	442
7.32	Global energy efficiency estimates for emerging motor technologies	443
7.33	Global technology prospects for motor systems	443

## Annex **B** GDP and Population Growth Assumptions

B.1	Economic growth assumptions	451
B.2	Population growth assumptions	452
