

INTERNATIONAL
ENERGY AGENCY

CLIMATE CHANGE, CLEAN ENERGY and SUSTAINABLE DEVELOPMENT

IEA'S G8 GLENEAGLES PROGRAMME

At their Gleneagles Summit in July 2005, G8 leaders addressed the challenges of climate change and securing clean energy and sustainable development.

Agreeing to act with resolve and urgency, they adopted a Plan of Action. A Dialogue was launched, open to other significant energy consumers. Brazil, China, India, Mexico and South Africa were also represented at the Summit.

The G8 leaders asked the International Energy Agency (IEA) to be a partner in this Dialogue and to play a major role in delivering the Plan of Action. It will focus on six broad areas:

- ◆ Alternative energy scenarios and strategies.
- ◆ Energy efficiency in buildings, appliances, transport and industry.
- ◆ Cleaner fossil fuels.
- ◆ Carbon capture and storage.
- ◆ Renewable energy.
- ◆ Enhanced international co-operation.

This leaflet provides an overview of the IEA's G8 Gleneagles Programme. Further details can be found at www.iea.org (click on "G8 Update"). Queries should be addressed to: G8Programme@iea.org.

What was said at Gleneagles?

G8 leaders: "It is in our global interests to work together, and in partnership with major emerging economies....."

The five developing countries: "...we propose a new paradigm for international cooperation..."

IEA was called upon to "**advise on alternative energy scenarios and strategies aimed at a clean, clever and competitive energy future**".

Activating IEA's G8 Gleneagles Programme

In fulfilling this mandate, the IEA plans to work in close co-operation with the governments of IEA member countries and with those of non-member countries. It will collaborate with international organisations, civil society representatives, non-governmental organisations, the business community, the World Bank and other international financial institutions, as well as its own extensive energy technology network.

Why IEA ?

Because IEA has the necessary know-how and structures.

- ◆ Strengths in analysis and data gathering on energy and climate policy.
- ◆ Networks of authoritative expertise on all energies.
- ◆ Global convening power.
- ◆ Existing collaborative links with relevant international organisations and industrial players.

How will IEA's G8 Gleneagles Programme work?

- ◆ *Alternative energy scenarios and strategies.* Modelling of scenarios will show how targeted policies and introduction of enhanced energy technologies can affect the economy, consumption of energy and CO₂ emissions in countries around the world. Investment priorities will be identified at global, regional and country level. A key objective will be in-depth analysis for non-IEA countries. This work will draw notably on the Reference and Alternative Scenarios from the IEA's *World Energy Outlook* and on the IEA's Global Energy Technology Perspectives project.

Players

- ◆ National authorities in IEA member and non-member countries.
- ◆ International organisations, regional bodies.
- ◆ Representatives of civil society, non-governmental organisations.
- ◆ Partners in the business communities of IEA member and non-member countries.
- ◆ IEA's broad-based community of energy technology R&D experts.

Communication

- ◆ Publications, papers, case studies.
- ◆ Workshops, conferences.
- ◆ Databases.

- ◆ Consult IEA's Web site for information on IEA international collaborative technology agreements (www.iea.org/techagr).

The IEA acts as energy policy adviser for its 26 member countries in their efforts to ensure reliable, affordable and clean energy for their citizens. Founded during the oil crisis of 1973-74, the IEA focuses on oil market issues, climate change policies, market reform and energy technology collaboration. It attaches great importance to outreach to the rest of the world and to strengthening co-operation with non-member countries. With a staff of around 150, mainly energy experts and statisticians from its 26 member countries, the IEA conducts a broad programme of energy research, data compilation, publications and public dissemination of the latest energy policy analysis and recommendations on good practices. IEA publications are known world-wide for their objectivity.

On 15 September 2005, the IEA's Governing Board welcomed the G8's Gleneagles initiatives and agreed that the Agency should contribute.
