### **The structure of the upstream industry 333**

|   |     |
|---|-----|
| Highlights  | 333 |
| The emergence of a new world order for oil        | 334 |
| The resurgence of the national oil companies      | 336 |
| International oil companies in profitable retreat | 343 |
| Implications for future investment and supply     | 348 |
| <i>Towards a more efficient industry</i>          | 350 |
| <i>Strengthening strategic partnerships</i>       | 351 |

15

### **Prospects in oil- and gas-exporting sub-Saharan African countries 355**

|   |     |
|---|-----|
| Highlights  | 355 |
| Overview  | 356 |
| Outlook for oil and gas production, exports and government revenues | 358 |
| <i>Resources and reserves</i>                                       | 358 |
| <i>Oil and gas production and exports</i>                           | 359 |
| <i>Oil refining</i>   | 363 |
| <i>Oil and gas export revenues</i>                                  | 364 |
| Household energy access in sub-Saharan African countries            | 364 |
| <i>Cooking practices</i>  | 365 |
| <i>Electricity access</i>   | 366 |
| <i>Projected trends in access to modern energy services</i>         | 369 |
| <i>Quantifying the costs involved in expanding access</i>           | 370 |
| Managing revenues from oil and gas                                  | 374 |

## **Part C: The role of energy in climate policy 378**

16

### **Implications of the Reference Scenario for the global climate 381**

|  |     |
|--|-----|
| Highlights   | 381 |
| Projected trends in energy-related CO <sub>2</sub> emissions           | 382 |
| <i>Overview</i>  | 382 |
| <i>Regional trends</i>   | 384 |
| <i>Trends per capita and per unit of GDP</i>                           | 388 |
| <i>Sectoral trends</i>   | 391 |
| Projected trends in overall greenhouse-gas emissions                   | 397 |
| Long-term greenhouse-gas concentrations and average global temperature | 401 |
| The impact of global warming on the energy sector                      | 402 |
| <i>Hydropower</i>  | 402 |
| <i>Other renewable energy systems</i>                                  | 403 |

|           |   |            |
|-----------|---|------------|
|           | <i>Thermal and nuclear power</i>  | 404        |
|           | Local and regional air pollution  | 404        |
|           | <i>Projected trends in local and regional air pollution</i>                 | 404        |
| <b>17</b> | <b>The post-2012 climate policy framework</b>                               | <b>407</b> |
|           | Highlights  | 407        |
|           | Co-ordinated global action to address climate change                        | 408        |
|           | Defining the long-term global climate objective                             | 410        |
|           | <i>Environmental and societal effects of different stabilisation levels</i> | 410        |
|           | <i>Practical considerations in reducing emissions</i>                       | 411        |
|           | <i>Climate scenarios modelled in WEO-2008</i>                               | 413        |
|           | Participation   | 416        |
|           | <i>Principles for allocating responsibilities</i>                           | 419        |
|           | Policy mechanisms   | 421        |
|           | <i>Cap-and-trade systems</i>  | 423        |
|           | <i>Sectoral agreements</i>  | 427        |
|           | <i>National policies and measures</i>                                       | 432        |
| <b>18</b> | <b>Climate policy scenarios</b>   | <b>435</b> |
|           | Highlights  | 435        |
|           | Methodology and assumptions   | 436        |
|           | <i>Modelling approach</i>   | 436        |
|           | <i>Economic growth</i>  | 437        |
|           | <i>Energy prices</i>  | 437        |
|           | <i>Carbon prices</i>  | 439        |
|           | Overview of the results of the climate scenarios                            | 439        |
|           | <i>Primary energy demand</i>  | 439        |
|           | <i>Energy-related CO<sub>2</sub> emissions</i>                              | 442        |
|           | <i>Emissions of gases other than energy-related CO<sub>2</sub></i>          | 447        |
|           | The 550 Policy Scenario: results by sector                                  | 450        |

## List of figures

### Part A: Global energy trends to 2030

#### Chapter 1. Context and principal assumptions

|     |   |    |
|-----|---|----|
| 1.1 | Energy subsidies in non-OECD countries, 2007              | 62 |
| 1.2 | Population by major region                                | 63 |
| 1.3 | Rate of growth of per-capita income by region             | 67 |
| 1.4 | Average IEA crude oil import price                        | 69 |
| 1.5 | Assumed natural gas and coal prices relative to crude oil | 72 |
| 1.6 | Typical lifetimes of energy-related capital stock         | 75 |

#### Chapter 2. Global energy trends

|     |  |    |
|-----|--|----|
| 2.1 | World primary energy demand by fuel in the Reference Scenario                              | 80 |
| 2.2 | World primary energy demand by region in the Reference Scenario                            | 81 |
| 2.3 | Incremental primary energy demand by fuel in the Reference Scenario, 2006-2030             | 82 |
| 2.4 | Per-capita primary energy demand by region, 2030   | 83 |
| 2.5 | Incremental world fossil-fuel production in the Reference Scenario                         | 87 |
| 2.6 | Cumulative investment in energy-supply infrastructure in the Reference Scenario, 2007-2030 | 89 |

#### Chapter 3. Oil market outlook

|     |   |    |
|-----|---|----|
| 3.1 | Change in world primary oil demand and real GDP growth                      | 93 |
| 3.2 | Oil intensity by region in the Reference Scenario                           | 94 |
| 3.3 | Global oil demand and the oil price in the three oil shocks                 | 95 |
| 3.4 | Average IEA crude oil import price in different currencies                  | 95 |
| 3.5 | Change in primary oil demand by region in the Reference Scenario, 2007-2030 | 97 |

|  |   |     |
|--|---|-----|
| 3.6  | Incremental oil demand by sector in the Reference Scenario, 2006-2030   | 98  |
| 3.7  | Light-duty vehicle stock by region in the Reference Scenario  | 100 |
| 3.8  | Share of oil spending in real GDP at market exchange rates in the Reference Scenario  | 102 |
| 3.9  | World oil production by source in the Reference Scenario  | 104 |
| 3.10   | Oil-import dependence by major importing region in the Reference Scenario   | 105 |
| 3.11   | Oil export flows from the Middle East   | 107 |
| <b>Chapter 4. Natural gas market outlook</b> |   |     |
| 4.1  | Change in gas intensity by region in the Reference Scenario   | 112 |
| 4.2  | Increase in primary demand for natural gas by region in the Reference Scenario  | 112 |
| 4.3  | Increase in world primary natural gas demand by sector in the Reference Scenario, 2006-2030   | 113 |
| 4.4  | World primary natural gas demand by sector in the Reference Scenario  | 114 |
| 4.5  | Natural gas production by region in the Reference Scenario  | 116 |
| 4.6  | Main net inter-regional natural gas trade flows in the Reference Scenario, 2006 and 2030  | 120 |
| 4.7  | World inter-regional natural gas trade by type in the Reference Scenario  | 121 |
| 4.8  | Inter-regional exports of LNG by source in the Reference Scenario   | 121 |
| <b>Chapter 5. Coal market outlook</b>        |   |     |
| 5.1  | Incremental world primary energy demand by fuel, 2000-2006  | 124 |
| 5.2  | Sectoral shares in coal demand by region in the Reference Scenario  | 126 |
| 5.3  | World energy-related CO <sub>2</sub> emissions by fuel in the Reference Scenario  | 127 |
| 5.4  | Proven coal reserves in leading producing countries, 2005   | 128 |
| 5.5  | World coal production by type in the Reference Scenario   | 129 |
| 5.6  | Net inter-regional hard coal trade in the Reference Scenario  | 133 |
| 5.7  | Index of selected fuel prices   | 135 |
| 5.8  | Coal supply cash-cost curve for internationally traded steam coal for 2007 and selected average FOB prices for 2007 and first-half 2008 | 136 |
| 5.9  | Structure of coal-supply costs for major exporting countries  | 137 |
| 5.10   | Cumulative investment in coal-supply infrastructure by region in the Reference Scenario, 2007-2030                                      | 137 |
| <b>Chapter 6. Power sector outlook</b>       |   |     |
| 6.1  | Electricity demand growth rates by region in the Reference Scenario   | 141 |
| 6.2  | Per-capita electricity demand by selected region in the Reference Scenario  | 142 |
| 6.3  | World electricity generation by fuel in the Reference Scenario  | 143 |
| 6.4  | Power-generation capacity under construction worldwide  | 144 |
| 6.5  | Coal-fired capacity under construction in OECD countries  | 145 |
| 6.6  | Efficiency improvements in coal-fired generation in the Reference Scenario  | 146 |
| 6.7  | Commodity price indices   | 152 |
| 6.8  | Electricity generating costs in selected regions  | 154 |
| 6.9  | Indices of real end-use fuel and electricity prices in OECD   | 156 |
| 6.10   | European wholesale prices of electricity and EU emission allowances   | 157 |

## Chapter 7. Renewable energy outlook

|     |   |     |
|-----|---|-----|
| 7.1 | Contribution of biomass to world primary energy demand, 2006                              | 161 |
| 7.2 | Share of total electricity generation from renewables by region in the Reference Scenario | 162 |
| 7.3 | Increase in world electricity generation from renewables in the Reference Scenario        | 163 |
| 7.4 | Increase in OECD electricity generation by energy source in the Reference Scenario        | 163 |
| 7.5 | Projected generating costs of renewable energy technologies in the Reference Scenario     | 164 |
| 7.6 | Projected investment costs of renewable energy technologies in the Reference Scenario     | 165 |
| 7.7 | Hydropower capacity under construction by region  | 166 |
| 7.8 | World biofuels consumption by type in the Reference Scenario                              | 172 |
| 7.9 | World investment in new power-generation plants by fuel in the Reference Scenario         | 178 |

## Chapter 8. Energy use in cities

|     |  |     |
|-----|--|-----|
| 8.1 | Regional trends in urbanisation  | 180 |
| 8.2 | World and city primary energy consumption in the Reference Scenario                    | 184 |
| 8.3 | US energy consumption in cities by state, 2006   | 186 |
| 8.4 | Per-capita energy demand in the European Union and EU cities in the Reference Scenario | 189 |
| 8.5 | Per-capita energy demand and gross regional product in selected Chinese cities, 2006   | 192 |

## Part B: Oil and gas production prospects

### Chapter 9. Turning oil resources into reserves

|      |  |     |
|------|--|-----|
| 9.1  | Hydrocarbon resource classification  | 199 |
| 9.2  | Estimated remaining world oil reserves, end-2007   | 202 |
| 9.3  | Proven remaining oil reserves by region, 1980-2007   | 203 |
| 9.4  | Oil discoveries and production, 1960-2006  | 203 |
| 9.5  | New field discoveries and reserves growth in 1996-2003 compared with USGS 2000 assessments                       | 205 |
| 9.6  | Global offshore oil discoveries to end-2006 versus exploration wells   | 208 |
| 9.7  | Maximum water depth of offshore exploration and production wells worldwide                                       | 209 |
| 9.8  | A case study of oil reserves growth: the impact of technology on oil production from the Weyburn field in Canada | 210 |
| 9.9  | Potential additional recoverable oil resources using CO <sub>2</sub> -EOR by region                              | 215 |
| 9.10 | Long-term oil-supply cost curve  | 218 |

### Chapter 10. Field-by-field analysis of oil production

|      |   |     |
|------|---|-----|
| 10.1 | World crude oil production from super-giant and giant fields by field vintage | 227 |
| 10.2 | Crude oil production by region and size of field, 2007                        | 228 |

|       |   |     |
|-------|---|-----|
| 10.3  | Standard oilfield-production profiles by category of field  | 232 |
| 10.4  | Standard oilfield-production profiles of giant fields   | 233 |
| 10.5  | Selected production profiles of recently developed medium-sized onshore fields compared with the standardised profile | 234 |
| 10.6  | Production-weighted average post-peak and post-plateau observed decline rates by field size                           | 239 |
| 10.7  | Production-weighted average post-peak observed decline rates by type of producer and year of first production         | 240 |
| 10.8  | Year-on-year change in the production-weighted average production from post-peak fields                               | 242 |
| 10.9  | Methodology for estimating natural decline rates  | 244 |
| 10.10 | Indicative natural decline rates by region  | 245 |
| 10.11 | Natural decline rates and reserves-to-production ratios by region, 2007   | 247 |
| 10.12 | Projected change in natural decline rates and reserves-to-production ratios by region, 2007 to 2030                   | 248 |

## Chapter 11. Prospects for oil production

|       |  |     |
|-------|--|-----|
| 11.1  | World oil production by source in the Reference Scenario   | 250 |
| 11.2  | Architecture of the Oil Supply Model   | 254 |
| 11.3  | Crude oil production from existing fields in OPEC and non-OPEC countries in the Reference Scenario                           | 256 |
| 11.4  | Crude oil production decline of existing fields by region in the Reference Scenario, 2007-2030                               | 256 |
| 11.5  | World crude oil production from new fields in the Reference Scenario   | 257 |
| 11.6  | Crude oil production from yet-to-be-developed fields in OPEC and non-OPEC countries by location in the Reference Scenario    | 258 |
| 11.7  | Conventional proven and probable crude oil reserves in yet-to-be-developed fields by region, end-2007                        | 258 |
| 11.8  | Number of yet-to-be-developed oilfields by region and location, end-2007   | 259 |
| 11.9  | World crude oil production of yet-to-be-found oilfields in OPEC and non-OPEC countries by location in the Reference Scenario | 260 |
| 11.10 | Enhanced oil recovery by country in the Reference Scenario   | 261 |
| 11.11 | World natural gas liquids production by OPEC and non-OPEC countries in the Reference Scenario                                | 261 |
| 11.12 | World non-conventional oil production by type in the Reference Scenario  | 262 |
| 11.13 | Crude oil quality worldwide in the Reference Scenario  | 265 |
| 11.14 | Change in oil production by country/region, 2007-2030  | 266 |
| 11.15 | Non-OPEC oil production by type in the Reference Scenario  | 268 |
| 11.16 | OPEC oil production by type in the Reference Scenario  | 273 |

## Chapter 12. Natural gas resources and production prospects

|      |  |     |
|------|--|-----|
| 12.1 | Proven reserves of natural gas                                     | 280 |
| 12.2 | Regional share in natural gas production and proven reserves, 2007 | 281 |
| 12.3 | Natural gas discoveries and cumulative production, 1960-2006       | 281 |

|      |   |     |
|------|---|-----|
| 12.4 | Tight gas drilling in the United States                       | 285 |
| 12.5 | Location of gas-hydrate resources                             | 289 |
| 12.6 | Change in natural gas production by country/region, 2007-2030 | 291 |
| 12.7 | US natural gas balance  | 293 |
| 12.8 | Natural gas production in Eastern Europe/Eurasia              | 296 |

### Chapter 13. Upstream investment prospects

|       |  |     |
|-------|--|-----|
| 13.1  | World investment in oil and gas exploration and production   | 304 |
| 13.2  | Upstream investment of surveyed companies by type of company   | 306 |
| 13.3  | Upstream oil and gas investment of surveyed companies by activity  | 308 |
| 13.4  | Investment in oil and gas exploration of surveyed companies  | 309 |
| 13.5  | Investment in new upstream oil and gas projects, 2008-2015   | 310 |
| 13.6  | Finding and development costs for US FRS companies   | 311 |
| 13.7  | Worldwide upstream drilling cost indices   | 315 |
| 13.8  | Day-rates for drilling rigs  | 316 |
| 13.9  | Drilling rig day-rates and the average IEA crude oil import price, 1995-2007                               | 316 |
| 13.10 | Average capital cost of upstream projects under development  | 317 |
| 13.11 | IEA Upstream Investment Cost Index by activity   | 318 |
| 13.12 | Offshore rigs under construction and effective utilisation rates   | 319 |
| 13.13 | Year-on-year change in world upstream investment and dollar-cost inflation rate                            | 321 |
| 13.14 | Indicators of upstream activity  | 321 |
| 13.15 | Gross peak-oil production capacity additions from current projects by region, 2008-2015                    | 322 |
| 13.16 | Cumulative upstream investment by region in the Reference Scenario, 2007-2030                              | 324 |
| 13.17 | OPEC oil and gas export revenues in the Reference Scenario   | 326 |
| 13.18 | OPEC countries' external account price thresholds to balance the external account                          | 327 |
| 13.19 | Demand for and supply of mid-career petrotechnical professionals aged 30 to 39 in North America and Europe | 330 |

### Chapter 14. The structure of the upstream industry

|      |   |     |
|------|---|-----|
| 14.1 | World oil and gas reserves and production by company, 2007                              | 335 |
| 14.2 | Foreign company access to proven oil reserves, end-2007                                 | 336 |
| 14.3 | Share of national oil and gas companies' upstream production from overseas assets, 2007 | 342 |
| 14.4 | Year-on-year increase in oil production of surveyed companies by type of company        | 343 |
| 14.5 | Net income of the super-majors versus the average IEA crude oil import price, 2000-2007 | 344 |
| 14.6 | International oil company outlays from operating cash-flow                              | 345 |
| 14.7 | International oil company oil and gas reserves replacement ratio                        | 346 |
| 14.8 | Return on average capital employed of the super-majors                                  | 347 |

|       |   |     |
|-------|---|-----|
| 14.9  | World oil and gas production by type of company in the Reference Scenario | 349 |
| 14.10 | Revenue and hydrocarbon production per employee by type of company, 2007  | 350 |

### Chapter 15. Prospects in oil- and gas-exporting sub-Saharan African countries

|      |  |     |
|------|--|-----|
| 15.1 | Share of oil and gas in total exports and of oil and gas revenues in government revenues in assessed sub-Saharan African countries, 2006 | 357 |
| 15.2 | Proven oil and gas reserves in assessed sub-Saharan African countries, end-2007  | 359 |
| 15.3 | Oil and gas production in assessed sub-Saharan African countries   | 360 |
| 15.4 | Gas flaring in assessed sub-Saharan African countries  | 362 |
| 15.5 | Oil and gas supply and infrastructure in sub-Saharan Africa  | 363 |
| 15.6 | Cumulative government oil and gas revenues in assessed sub-Saharan African countries, 2006-2030  | 364 |
| 15.7 | Regional power pools in Africa   | 368 |
| 15.8 | Total additional cost of universal access to electricity and clean cooking stoves in assessed sub-Saharan African countries              | 371 |

## Part C: The role of energy in climate policy

### Chapter 16. Implications of the Reference Scenario for the global climate

|       |  |     |
|-------|--|-----|
| 16.1  | Energy-related CO <sub>2</sub> emissions in the Reference Scenario by fuel and region  | 382 |
| 16.2  | Average annual growth in world primary energy demand and energy related CO <sub>2</sub> emissions in the Reference Scenario                        | 384 |
| 16.3  | Average annual increase in energy-related CO <sub>2</sub> emissions by region in the Reference Scenario  | 385 |
| 16.4  | Incremental energy-related CO <sub>2</sub> emissions by country and region, 2006-2030  | 386 |
| 16.5  | Ten largest inter-regional flows of energy-related CO <sub>2</sub> emissions embedded in exports of goods and services, 2006                       | 388 |
| 16.6  | Average annual rate of change in energy-related CO <sub>2</sub> emissions per unit of GDP by region, 2006-2030                                     | 389 |
| 16.7  | Energy-related CO <sub>2</sub> emissions in cities by region in the Reference Scenario   | 391 |
| 16.8  | Energy-related CO <sub>2</sub> emissions from power plants by fuel and region in the Reference Scenario  | 392 |
| 16.9  | CO <sub>2</sub> intensity of power generation by region in the Reference Scenario  | 392 |
| 16.10 | Change in transport sector CO <sub>2</sub> emissions by mode and region in the Reference Scenario, 2006-2030                                       | 394 |
| 16.11 | Industry sector energy-related CO <sub>2</sub> emissions by region in the Reference Scenario   | 395 |
| 16.12 | Increase in direct and indirect energy-related CO <sub>2</sub> emissions by region in the residential, services and agriculture sectors, 2006-2030 | 396 |
| 16.13 | World anthropogenic greenhouse-gas emissions by source, 2005   | 398 |

|       |  |     |
|-------|--|-----|
| 16.14 | World anthropogenic greenhouse-gas emissions by source in the Reference Scenario, 2005-2030                                | 400 |
| 16.15 | Total greenhouse-gas emissions other than energy-related CO <sub>2</sub> by region in the Reference Scenario               | 400 |
| 16.16 | Energy-related CO <sub>2</sub> emissions in the Reference Scenario to 2030 compared with other published scenarios to 2100 | 402 |

## Chapter 17. The post-2012 climate policy framework

|      |  |     |
|------|--|-----|
| 17.1 | Potential effects of stabilisation of atmospheric concentrations of greenhouse gases at different levels   | 412 |
| 17.2 | Energy-related CO <sub>2</sub> emissions from existing and future power plants in the Reference Scenario   | 413 |
| 17.3 | Greenhouse-gas concentration trajectories by scenario  | 414 |
| 17.4 | Energy-related CO <sub>2</sub> emissions in the 550 Policy Scenario and 450 Policy Scenario  | 415 |
| 17.5 | Regional shares of world energy-related CO <sub>2</sub> emissions in the Reference Scenario for different levels of participation, 2020                              | 417 |
| 17.6 | Reduction in world energy-related CO <sub>2</sub> emissions in the 450 and 550 Policy Scenarios compared with total OECD emissions in the Reference Scenario in 2030 | 418 |
| 17.7 | Hybrid policy framework assumed in the 450 and 550 Policy Scenarios  | 422 |
| 17.8 | Suitability of sectors to sectoral agreements  | 430 |

## Chapter 18. Climate policy scenarios

|       |   |     |
|-------|---|-----|
| 18.1  | Change in electricity prices in OECD+ countries in the 550 Policy Scenario compared with the Reference Scenario                     | 438 |
| 18.2  | Change in primary energy demand in the 550 Policy Scenario relative to the Reference Scenario by fuel and region, 2030              | 440 |
| 18.3  | Energy-related CO <sub>2</sub> emissions reduction by region in the 550 and 450 Policy Scenarios relative to the Reference Scenario | 443 |
| 18.4  | Energy-related CO <sub>2</sub> emissions by source in the 550 and 450 Policy Scenarios relative to the Reference Scenario           | 446 |
| 18.5  | Global emissions of all greenhouse gases in the Reference, 550 and 450 Policy Scenarios   | 449 |
| 18.6  | CO <sub>2</sub> emissions per MWh of electricity generated in the 550 Policy Scenario compared with the Reference Scenario          | 452 |
| 18.7  | Fuel shares in world electricity generation in the Reference and 550 Policy Scenarios   | 453 |
| 18.8  | Change in coal- and gas-fired generation by region in the 550 Policy Scenario   | 454 |
| 18.9  | World non-hydropower renewable electricity generation by source in the 550 Policy Scenario  | 455 |
| 18.10 | Share of nuclear power in electricity generation by region in the 550 Policy Scenario   | 456 |
| 18.11 | Energy-related CO <sub>2</sub> emissions from industry by region in the Reference and 550 Policy Scenarios                          | 458 |

|       |   |     |
|-------|---|-----|
| 18.12 | CO <sub>2</sub> intensity improvement in the iron and steel sector and the cement sector by region in the Reference and 550 Policy Scenarios  | 460 |
| 18.13 | Energy-related CO <sub>2</sub> emissions from the iron and steel and non-metallic minerals sectors in the Reference Scenario, 2030            | 461 |
| 18.14 | CO <sub>2</sub> intensity standards of light-duty vehicles by region in the 550 Policy Scenario   | 463 |
| 18.15 | Change in energy-related CO <sub>2</sub> emissions in the buildings and other sectors in the Reference and 550 Policy Scenarios, 2006-2030    | 465 |
| 18.16 | CO <sub>2</sub> emissions reduction from the power sector in the 550 and 450 Policy Scenarios relative to the Reference Scenario              | 468 |
| 18.17 | World electricity generation fuel mix in the 450 Policy Scenario relative to the 550 Policy Scenario  | 469 |
| 18.18 | Electricity generation by fuel and by regional grouping in the 450 Policy Scenario, 2030  | 470 |
| 18.19 | Shares in world electricity generation by type of coal plant in the Reference, 550 and 450 Policy Scenarios                                   | 471 |
| 18.20 | OECD+ net oil and gas imports in the Reference and 550 Policy Scenarios, 2030   | 475 |
| 18.21 | Percentage reduction in NO <sub>x</sub> and SO <sub>2</sub> emissions by region in the 550 Policy Scenario relative to the Reference Scenario | 477 |

## Chapter 19. Implications for energy investment

|       |  |     |
|-------|--|-----|
| 19.1  | Change in total world energy-related investments by sector in the 550 Policy Scenario relative to the Reference Scenario, 2010-2030            | 481 |
| 19.2  | Additional investment in power plants and energy efficiency by region in the 550 Policy Scenario relative to the Reference Scenario, 2010-2030 | 482 |
| 19.3  | Investment in the power sector in Other Major Economies and Other Countries in the 550 Policy Scenario and Reference Scenario, 2010-2030       | 482 |
| 19.4  | Additional investment per capita by private consumers in the 550 Policy Scenario relative to the Reference Scenario, 2010-2030                 | 483 |
| 19.5  | Electricity generating costs in Europe and the United States assuming different carbon prices in the 550 Policy Scenario, 2030                 | 484 |
| 19.6  | Average light-duty vehicle fleet efficiency by region, 2006  | 486 |
| 19.7  | Fuel cost savings by region in the 550 Policy Scenario relative to the Reference Scenario, 2010-2030   | 488 |
| 19.8  | Change in power plant and energy efficiency investments in the Policy Scenarios relative to the Reference Scenario                             | 489 |
| 19.9  | Additional energy-related investment by region in the 450 Policy Scenario relative to the Reference Scenario, 2010-2030                        | 490 |
| 19.10 | Additional energy-related investment per private consumer in the 450 Policy Scenario relative to the Reference Scenario, 2021-2030             | 490 |
| 19.11 | Age distribution of power plants in the OECD+ region, 2006   | 492 |

|       |   |     |
|-------|---|-----|
| 19.12 | Global carbon market trading volumes and values, 2006 and 2007  | 496 |
| 19.13 | Revenues from full auctioning of CO <sub>2</sub> allowances compared with additional investment in the 450 and 550 Policy Scenarios relative to the Reference Scenario, 2013-2030 | 499 |

## List of tables

### Part A: Global energy trends to 2030

#### Chapter 1. Context and principal assumptions

|     |   |    |
|-----|---|----|
| 1.1 | Major new energy-related policy initiatives adopted between mid-2007 and mid-2008 | 60 |
| 1.2 | Population growth by region   | 64 |
| 1.3 | Real GDP growth by region   | 66 |
| 1.4 | Fossil-fuel price assumptions   | 68 |

#### Chapter 2. Global energy trends

|     |  |    |
|-----|--|----|
| 2.1 | World primary energy demand by fuel in the Reference Scenario                              | 78 |
| 2.2 | World primary energy demand by region in the Reference Scenario                            | 81 |
| 2.3 | World final energy consumption by sector in the Reference Scenario                         | 84 |
| 2.4 | Cumulative investment in energy-supply infrastructure in the Reference Scenario, 2007-2030 | 88 |

#### Chapter 3. Oil market outlook

|     |  |     |
|-----|--|-----|
| 3.1 | World primary oil demand in the Reference Scenario                           | 93  |
| 3.2 | Share of transport in primary oil demand by region in the Reference Scenario | 99  |
| 3.3 | World oil supply in the Reference Scenario                                   | 103 |
| 3.4 | Net inter-regional oil trade in the Reference Scenario                       | 106 |

#### Chapter 4. Natural gas market outlook

|     |  |     |
|-----|--|-----|
| 4.1 | World primary demand for natural gas in the Reference Scenario | 110 |
| 4.2 | World natural gas production in the Reference Scenario         | 115 |
| 4.3 | Net inter-regional natural gas trade in the Reference Scenario | 118 |
| 4.4 | Natural gas liquefaction capacity                              | 122 |

#### Chapter 5. Coal market outlook

|     |  |     |
|-----|--|-----|
| 5.1 | World primary coal demand in the Reference Scenario          | 125 |
| 5.2 | World coal production in the Reference Scenario              | 129 |
| 5.3 | Net inter-regional hard coal trade in the Reference Scenario | 132 |

#### Chapter 6. Power sector outlook

|     |   |     |
|-----|---|-----|
| 6.1 | World final electricity consumption by region in the Reference Scenario | 140 |
| 6.2 | Nuclear power plants under construction as of end-August 2008           | 148 |

|     |   |     |
|-----|---|-----|
| 6.3 | Recent CCS proposals and developments   | 150 |
| 6.4 | Projected capacity additions and investment needs in power infrastructure in the Reference Scenario | 151 |
| 6.5 | Factors influencing power plant pricing   | 153 |

### **Chapter 7. Renewable energy outlook**

|     |   |     |
|-----|---|-----|
| 7.1 | Top-ten wind power markets, 2006                                  | 166 |
| 7.2 | Final consumption of biofuels by region in the Reference Scenario | 172 |

### **Chapter 8. Energy use in cities**

|     |  |     |
|-----|--|-----|
| 8.1 | Overview of city energy use and urbanisation rate in regions and countries analysed in-depth, 2006 | 182 |
| 8.2 | World energy demand in cities by fuel in the Reference Scenario                                    | 183 |
| 8.3 | US energy demand in cities by fuel in the Reference Scenario                                       | 187 |
| 8.4 | European Union energy demand in cities by fuel in the Reference Scenario                           | 189 |
| 8.5 | Australasian energy demand in cities by fuel in the Reference Scenario                             | 191 |
| 8.6 | Chinese energy demand in cities by fuel in the Reference Scenario                                  | 193 |

## **Part B: Oil and gas production prospects**

### **Chapter 9. Turning oil resources into reserves**

|     |   |     |
|-----|---|-----|
| 9.1 | World ultimately recoverable conventional oil and NGL resources, end-2007 | 205 |
| 9.2 | Estimated 2007 incremental production from EOR projects by technology     | 213 |
| 9.3 | Pre-screening criteria for EOR  | 214 |
| 9.4 | Extra-heavy oil and oil sands resources                                   | 216 |

### **Chapter 10. Field-by-field analysis of oil production**

|       |  |     |
|-------|--|-----|
| 10.1  | The world's 20 biggest oilfields by production                                 | 225 |
| 10.2  | World crude oil production by output and age of field                          | 226 |
| 10.3  | Geographical distribution of the world's super-giant and giant oilfields       | 227 |
| 10.4  | Average depletion factor of producing fields by size, 2007                     | 229 |
| 10.5  | Initial reserves of oilfield dataset for production profiling                  | 230 |
| 10.6  | Production characteristics of sample oilfield dataset for production profiling | 231 |
| 10.7  | Number of oilfields in dataset for decline rate calculations                   | 236 |
| 10.8  | Production-weighted average observed decline rates by size and type of field   | 238 |
| 10.9  | Production-weighted average annual observed decline rates by region            | 239 |
| 10.10 | Production-weighted average post-peak observed decline rates by vintage        | 240 |

|       |  |     |
|-------|--|-----|
| 10.11 | Production-weighted average annual observed decline rates by decline phase                                       | 241 |
| 10.12 | Estimated production-weighted average annual observed post-peak decline rates for all fields worldwide by region | 243 |
| 10.13 | Average year-on-year decline rates for selected North Sea oilfields  | 246 |

### Chapter 11. Prospects for oil production

|      |  |     |
|------|--|-----|
| 11.1 | World oil production and supply in the Reference Scenario  | 251 |
| 11.2 | Average size of yet-to-be-developed oilfields by region, end-2007  | 259 |
| 11.3 | Non-OPEC oil production in the Reference Scenario  | 267 |
| 11.4 | OPEC oil production in the Reference Scenario  | 272 |
| 11.5 | World cumulative investment in the upstream oil sector under different decline rate assumptions for existing fields, 2007-2030 | 277 |

### Chapter 12. Natural gas resources and production prospects

|      |  |     |
|------|--|-----|
| 12.1 | Remaining proven reserves and mean estimates of ultimately recoverable conventional resources of natural gas, end-2007 | 282 |
| 12.2 | World proven sour gas reserves, end-2006   | 283 |
| 12.3 | Enhanced coalbed methane CO <sub>2</sub> sequestration potential by country/region                                     | 287 |
| 12.4 | Natural gas production in the Reference Scenario   | 290 |
| 12.5 | Qatari LNG projects  | 299 |

### Chapter 13. Upstream investment prospects

|      |   |     |
|------|---|-----|
| 13.1 | Companies in investment survey, 2007  | 307 |
| 13.2 | New upstream oil and gas projects, 2008-2015                                  | 312 |
| 13.3 | Cumulative upstream investment by region in the Reference Scenario, 2007-2030 | 324 |

### Chapter 14. The structure of the upstream industry

|      |   |     |
|------|---|-----|
| 14.1 | Key indicators of leading oil and gas companies, 2007 | 338 |
|------|---|-----|

### Chapter 15. Prospects in oil- and gas-exporting sub-Saharan African countries

|      |   |     |
|------|---|-----|
| 15.1 | Production and reserves in assessed sub-Saharan African countries   | 356 |
| 15.2 | Number of people without access to electricity and relying on fuelwood and charcoal for cooking in assessed sub-Saharan African countries | 358 |
| 15.3 | Oil production maturity of assessed sub-Saharan African countries, 2007   | 360 |
| 15.4 | Annual premature death and disability associated with indoor air pollution in assessed sub-Saharan African countries                      | 366 |
| 15.5 | Access to electricity and reliance on fuelwood and charcoal in assessed sub-Saharan African countries                                     | 370 |

|      |   |     |
|------|---|-----|
| 15.6 | Cumulative cost of providing universal access to modern energy in assessed sub-Saharan African countries, 2006-2030 | 374 |
|------|---|-----|

## Part C: The role of energy in climate policy

### Chapter 16. Implications of the Reference Scenario for the global climate

|      |   |     |
|------|---|-----|
| 16.1 | Impact of retail-price increases on primary energy demand and energy-related CO <sub>2</sub> emissions by region, 2004-2006 | 383 |
| 16.2 | Energy-related CO <sub>2</sub> emissions by region in the Reference Scenario  | 385 |
| 16.3 | Per-capita energy-related CO <sub>2</sub> emissions by region in the Reference Scenario                                     | 389 |
| 16.4 | Transport sector energy-related CO <sub>2</sub> emissions by region in the Reference Scenario                               | 393 |
| 16.5 | Emissions of major air pollutants by region in the Reference Scenario   | 405 |

### Chapter 17. The post-2012 climate policy framework

|      |   |     |
|------|---|-----|
| 17.1 | The world's five biggest emitters of energy-related CO <sub>2</sub>   | 417 |
| 17.2 | Change in 2020 of regional energy-related CO <sub>2</sub> emissions, under different allocation mechanisms, to achieve a 10% reduction in global emissions relative to the Reference Scenario | 420 |
| 17.3 | Existing, announced and proposed emissions-trading systems  | 425 |
| 17.4 | Examples of city climate-change policy targets  | 433 |

### Chapter 18. Climate policy scenarios

|       |   |     |
|-------|---|-----|
| 18.1  | Macroeconomic cost of mitigation  | 437 |
| 18.2  | World primary energy demand in the 550 Policy Scenario  | 439 |
| 18.3  | World primary energy demand in the 450 Policy Scenario  | 441 |
| 18.4  | Energy-related CO <sub>2</sub> emissions by sector and fuel in the 550 and 450 Policy Scenarios   | 444 |
| 18.5  | Major initiatives to reduce energy-related CO <sub>2</sub> emissions in Other Major Economies   | 445 |
| 18.6  | Electricity generation and related CO <sub>2</sub> emissions in the 550 Policy Scenario compared with the Reference Scenario                | 451 |
| 18.7  | Capacity additions in the 550 Policy Scenario   | 456 |
| 18.8  | Energy demand and energy-related CO <sub>2</sub> emissions in industry in the 550 Policy Scenario   | 458 |
| 18.9  | Energy demand and energy-related CO <sub>2</sub> emissions in transport in the 550 Policy Scenario  | 462 |
| 18.10 | Energy demand and energy-related CO <sub>2</sub> emissions by fuel and region in the buildings and other sectors in the 550 Policy Scenario | 467 |
| 18.11 | Power generation and energy-related CO <sub>2</sub> emissions in the 450 Policy Scenario, 2030  | 468 |
| 18.12 | Capacity additions in the 450 Policy Scenario relative to the 550 Policy Scenario, 2020-2030  | 471 |

## List of boxes

### Part A: Global energy trends to 2030

#### Chapter 1. Context and principal assumptions

- |     |  |    |
|-----|--|----|
| 1.1 | Improvements to the modelling framework in WEO-2008      | 61 |
| 1.2 | Implications of new estimates of purchasing power parity | 67 |

#### Chapter 2. Global energy trends

- |     |  |    |
|-----|--|----|
| 2.1 | How do the new <i>WEO</i> assumptions affect global energy trends compared with last year? | 79 |
|-----|--|----|

#### Chapter 3. Oil market outlook

- |     |  |     |
|-----|--|-----|
| 3.1 | The impact on demand of removing oil subsidies | 96  |
| 3.2 | Averting a post-2010 oil-supply crunch         | 104 |

#### Chapter 4. Natural gas market outlook

- |     |  |     |
|-----|--|-----|
| 4.1 | Adequacy of gas-supply infrastructure and risks of shortages | 116 |
|-----|--|-----|

#### Chapter 5. Coal market outlook

- |     |  |     |
|-----|--|-----|
| 5.1 | Alternative energy supplies: underground coal gasification and coal-mine methane | 130 |
|-----|--|-----|

#### Chapter 7. Renewable energy outlook

- |     |  |     |
|-----|--|-----|
| 7.1 | Land use required to grow biomass for energy | 161 |
| 7.2 | Energy storage                               | 169 |

#### Chapter 8. Energy use in cities

- |     |  |     |
|-----|--|-----|
| 8.1 | Methodological issues and city energy data | 181 |
|-----|--|-----|

### Part B: Oil and gas production prospects

#### Chapter 9. Turning oil resources into reserves

- |     |   |     |
|-----|---|-----|
| 9.1 | Defining and measuring conventional and non-conventional hydrocarbon reserves in the <i>WEO</i> | 200 |
| 9.2 | Proposed new SEC reserve-reporting rules  | 201 |
| 9.3 | Potential for exploiting Arctic resources   | 206 |
| 9.4 | Pre-salt deepwater potential in Brazil  | 207 |
| 9.5 | Deploying EOR: when, how and at what cost?  | 214 |

#### Chapter 10. Field-by-field analysis of oil production

- |      |  |     |
|------|--|-----|
| 10.1 | The IEA field-by-field oil production database       | 224 |
| 10.2 | Oilfield production-profiling methodology            | 231 |
| 10.3 | How do we define and calculate decline rates?        | 235 |
| 10.4 | The Ghawar field: the super-giant among super-giants | 237 |

|  |  |     |
|--|--|-----|
| <b>Chapter 11. Prospects for oil production</b>                                      |  |     |
| 11.1   | Modelling oil production in <i>WEO-2008</i>  | 252 |
| <b>Chapter 12. Natural gas resources and production prospects</b>                    |  |     |
| 12.1   | Sour gas reserves: a costly nuisance?  | 283 |
| 12.2   | CO <sub>2</sub> -enhanced coalbed methane (ECBM) production: a dual benefit?   | 286 |
| <b>Chapter 13. Upstream investment prospects</b>                                     |  |     |
| 13.1   | Approach to assessing the outlook for upstream investment  | 305 |
| 13.2   | Impact of the credit crunch on upstream financing  | 309 |
| 13.3   | IEA Upstream Investment Cost Index   | 318 |
| <b>Chapter 14. The structure of the upstream industry</b>                            |  |     |
| 14.1   | The rise of the oilfield-services companies  | 341 |
| <b>Chapter 15. Prospects in oil- and gas-exporting sub-Saharan African countries</b> |  |     |
| 15.1   | Gas flaring: what are the costs?   | 361 |
| 15.2   | Regional power pools and the Grand Inga project  | 367 |
| 15.3   | Government programmes to promote the use of clean cooking fuels and rural electrification in Africa: success stories | 369 |
| 15.4   | The prospects for renewables to meet rural household energy needs  | 372 |
| 15.5   | Subsidies: how best to safeguard energy-poor households?   | 373 |
| 15.6   | Revenue management in Botswana: a success story  | 375 |
| <br>   |  |     |
| <b>Part C: The role of energy in climate policy</b>                                  |  |     |
| <b>Chapter 16. Implications of the Reference Scenario for the global climate</b>     |  |     |
| 16.1   | Projected energy-related CO <sub>2</sub> emissions compared with <i>WEO-2007</i>                                     | 383 |
| 16.2   | Global city energy-related CO <sub>2</sub> emissions in the Reference Scenario                                       | 390 |
| 16.3   | Greenhouse-gas emissions data and projections  | 397 |
| <b>Chapter 17. The post-2012 climate policy framework</b>                            |  |     |
| 17.1   | Discerning a stabilisation limit from the IPCC findings  | 411 |
| 17.2   | Principles for differentiating responsibilities  | 419 |
| 17.3   | Non-binding targets for non-OECD countries?  | 427 |
| 17.4   | Carbon leakage and loss of competitiveness   | 429 |
| 17.5   | Sectoral approaches and the power-generation sector  | 431 |
| 17.6   | CO <sub>2</sub> savings potential of cities  | 432 |
| <b>Chapter 18. Climate policy scenarios</b>  |  |     |
| 18.1   | Outlook for energy-related CO <sub>2</sub> emissions to 2050   | 447 |
| 18.2   | Vintages of capital stock in iron and steel and cement sectors   | 461 |
| <b>Chapter 19. Implications for energy investment</b>                                |  |     |
| 19.1   | Stepping up research, development and demonstration to promote climate-friendly technologies                         | 491 |

|      |   |     |
|------|---|-----|
| 19.2 | Shutting down coal-fired power plants in Ontario, Canada              | 493 |
| 19.3 | What next for the Clean Development Mechanism?                        | 497 |
| 19.4 | The importance of intellectual property laws for technology diffusion | 500 |

## List of spotlights

### Part A: Global energy trends to 2030

#### Chapter 1. Context and principal assumptions

|  |    |
|--|----|
| Are speculators to blame for soaring oil prices? | 71 |
|--|----|

#### Chapter 3. Oil market outlook

|  |     |
|--|-----|
| What is the scope for switching from oil-fuelled to electric vehicles? | 101 |
|--|-----|

#### Chapter 4. Natural gas market outlook

|   |     |
|---|-----|
| Are high prices choking off demand for gas? | 111 |
|---|-----|

#### Chapter 6. Power sector outlook

|  |     |
|--|-----|
| What are the risks of investing in the power sector? | 155 |
|--|-----|

#### Chapter 7. Renewable energy outlook

|   |     |
|---|-----|
| To what extent are biofuels driving up the price of food? | 173 |
|---|-----|

### Part B: Oil and gas production prospects

#### Chapter 9. Turning oil resources into reserves

|   |     |
|---|-----|
| How soon – if ever – could oil recovery factors be raised to 50%? | 212 |
|---|-----|

#### Chapter 10. Field-by-field analysis of oil production

|  |     |
|--|-----|
| What do rising decline rates mean for oil production and investment? | 223 |
|--|-----|

#### Chapter 13. Upstream investment prospects

|   |     |
|---|-----|
| Is strong demand leading to more drilling capacity? | 320 |
|---|-----|

### Part C: The role of energy in climate policy

#### Chapter 16. Implications of the Reference Scenario for the global climate

|   |     |
|---|-----|
| How much of the world's energy-related CO <sub>2</sub> emissions are "embedded" in internationally traded goods and services? | 386 |
|---|-----|

#### Chapter 17. The post-2012 climate policy framework

|   |     |
|---|-----|
| Why is it an absolute "must" for non-OECD countries to play their part in a global climate-change regime? | 418 |
|---|-----|
