MoEN/IEA Joint Workshop on *'Fuel Options for Power Generation in ASEAN'*

Bangkok, Thailand
22-23 September, 2008

Importance of Base Load Generation for
Competitive, Reliable and Sustainable
Electricity Supply

● Outline

- **Global perspective on power sector trends and generation mix**
- **Base load and peak load power stations**
- **Base load generation options and investment decisions**
- **Key messages**

© OECD/IEA
2008

Reference Scenario: World Electricity Generation 1990-2030

World electricity generation nearly doubles between 2005 & 2030, with coal maintaining its dominant position

© OECD/IEA
2008

Reference Scenario: Fuel Mix in Power Generation

Dependence on coal for power rises strongly in emerging economies

© OECD/IEA
2008 50

Reference Scenario: Global Energy-Related CO₂ Emissions

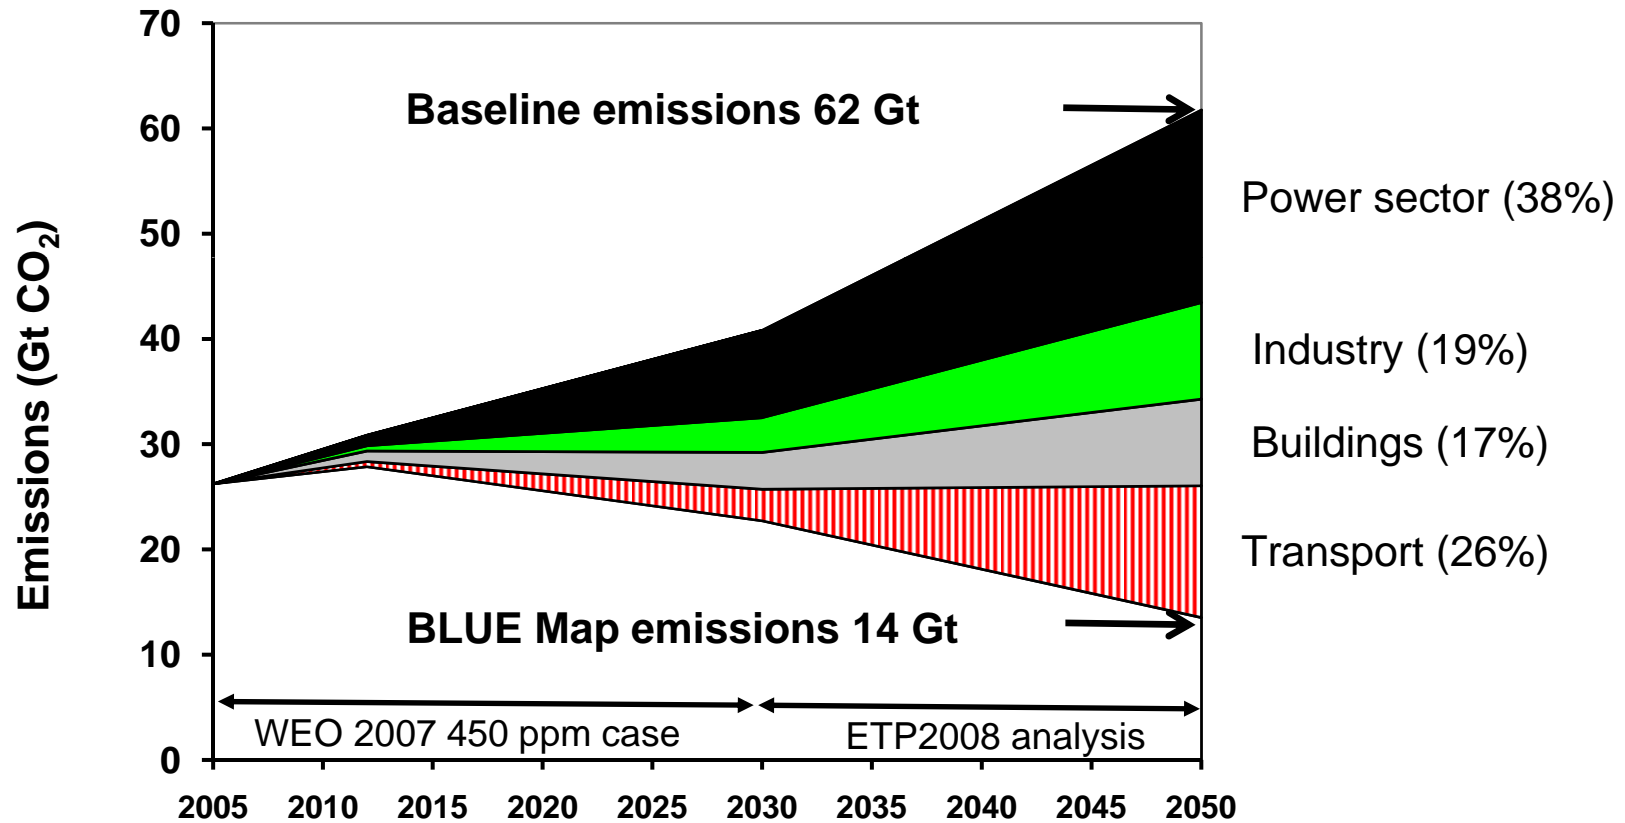

Global CO₂ emissions rise to 42 Gt in 2030, 57% above current levels and double the 1990 level

© OECD/IEA
2008

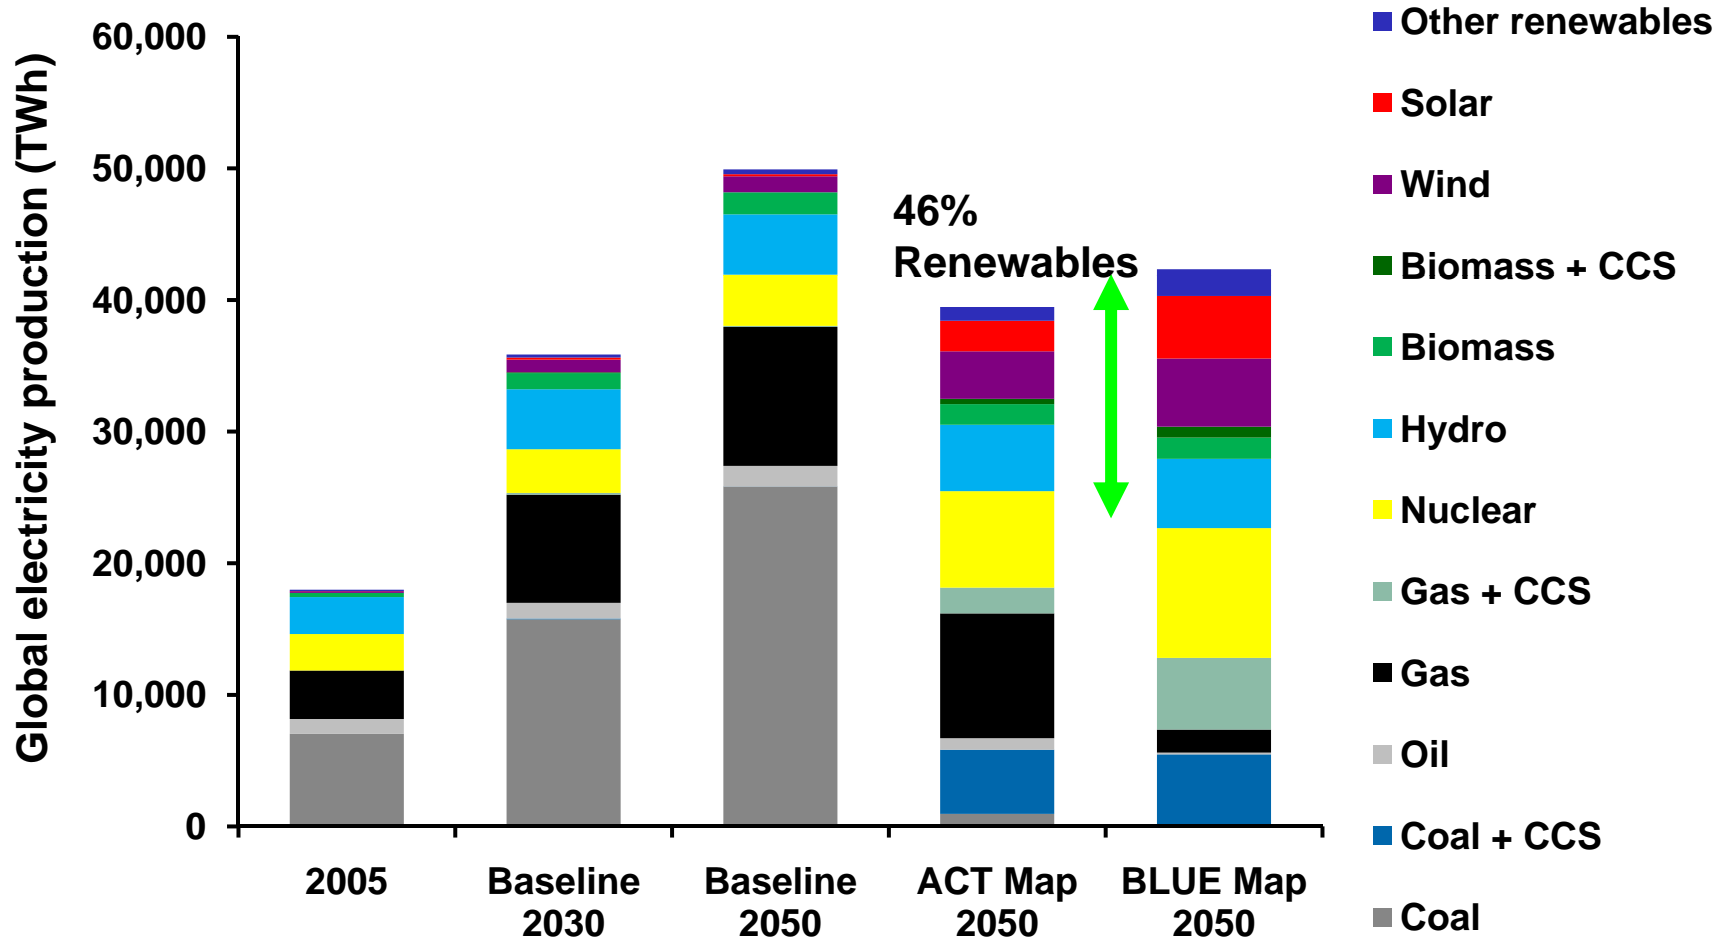

Global CO₂ reduction – Potential contribution by sector

Global Power Generation Mix

Hydro-based Generation

● Challenges

- ◆ Often requires new transmission capacity
- ◆ Environmental and social implications
- ◆ Long lead times
- ◆ Variability of water levels

● Opportunities

- ◆ Well established technology
- ◆ No GHG emissions
- ◆ Highly cost competitive
- ◆ Load following
- ◆ Hydro & wind a good combination

HQ Hydro facilities
Baie-James, Canada

Non-hydro renewables are becoming part of the main stream generation...

IEA Blue Map Scenario – 2050

Total wind power generated 5 174 TWh

Nuclear Power Generation Projections

© OECD/IEA
2008

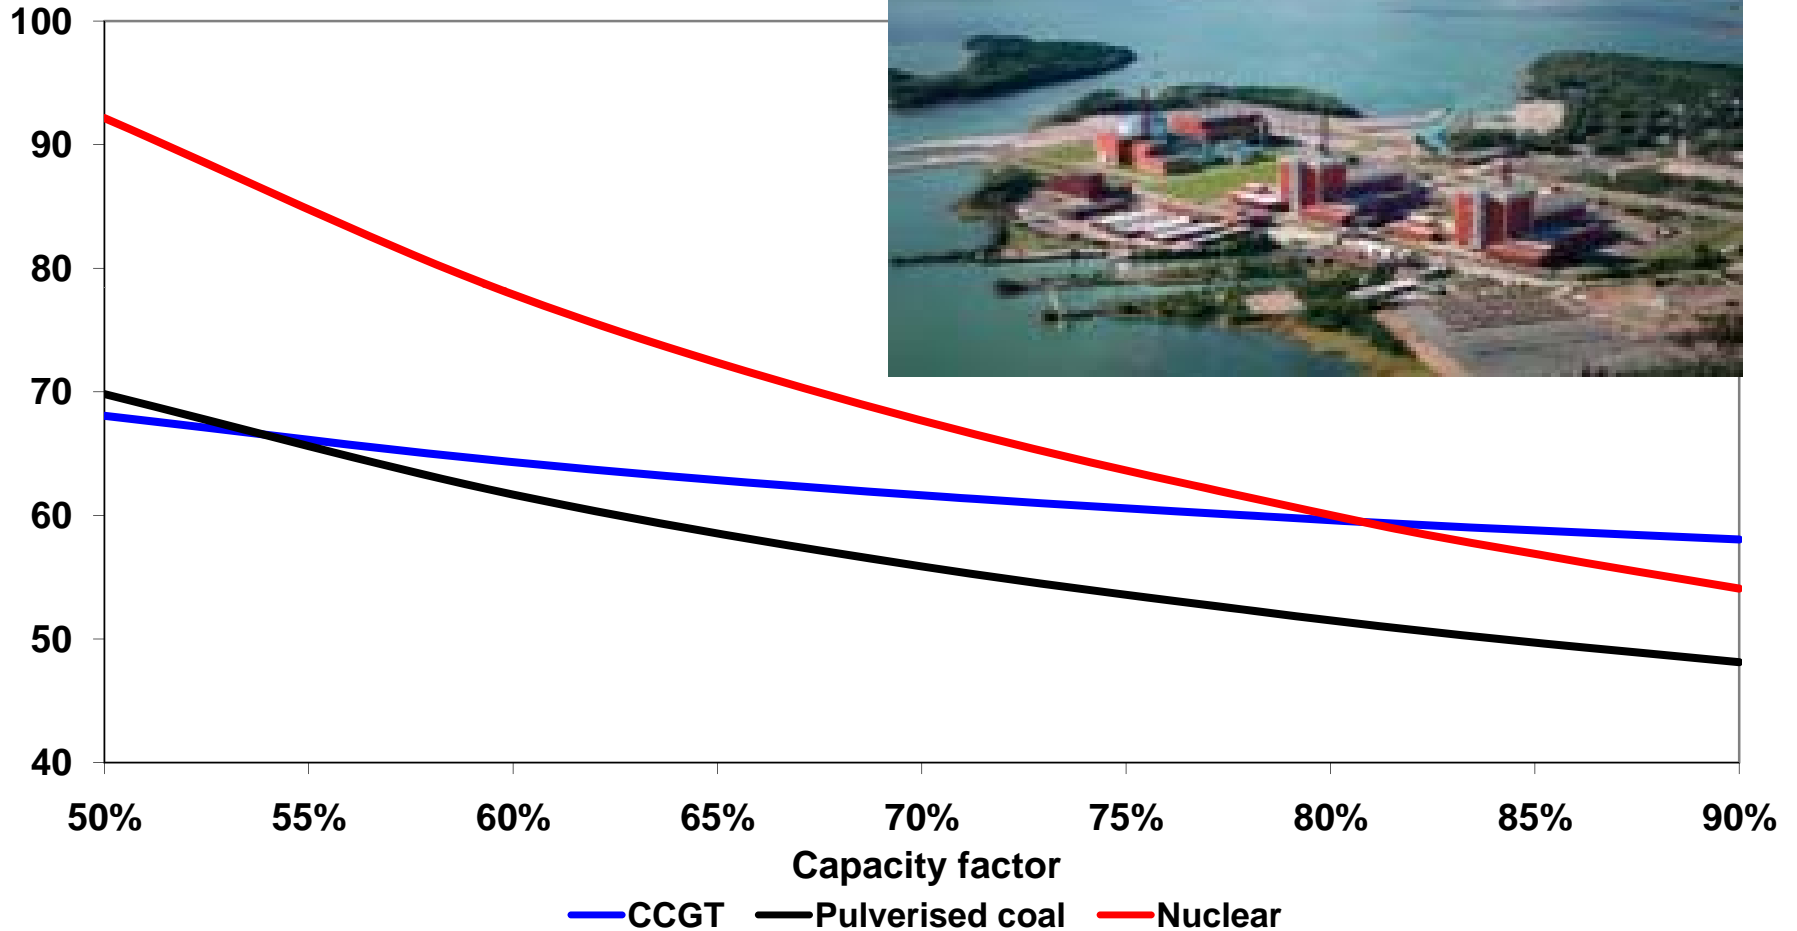

Competitiveness of nuclear power is highly sensitive to capacity factor

© OECD/IEA

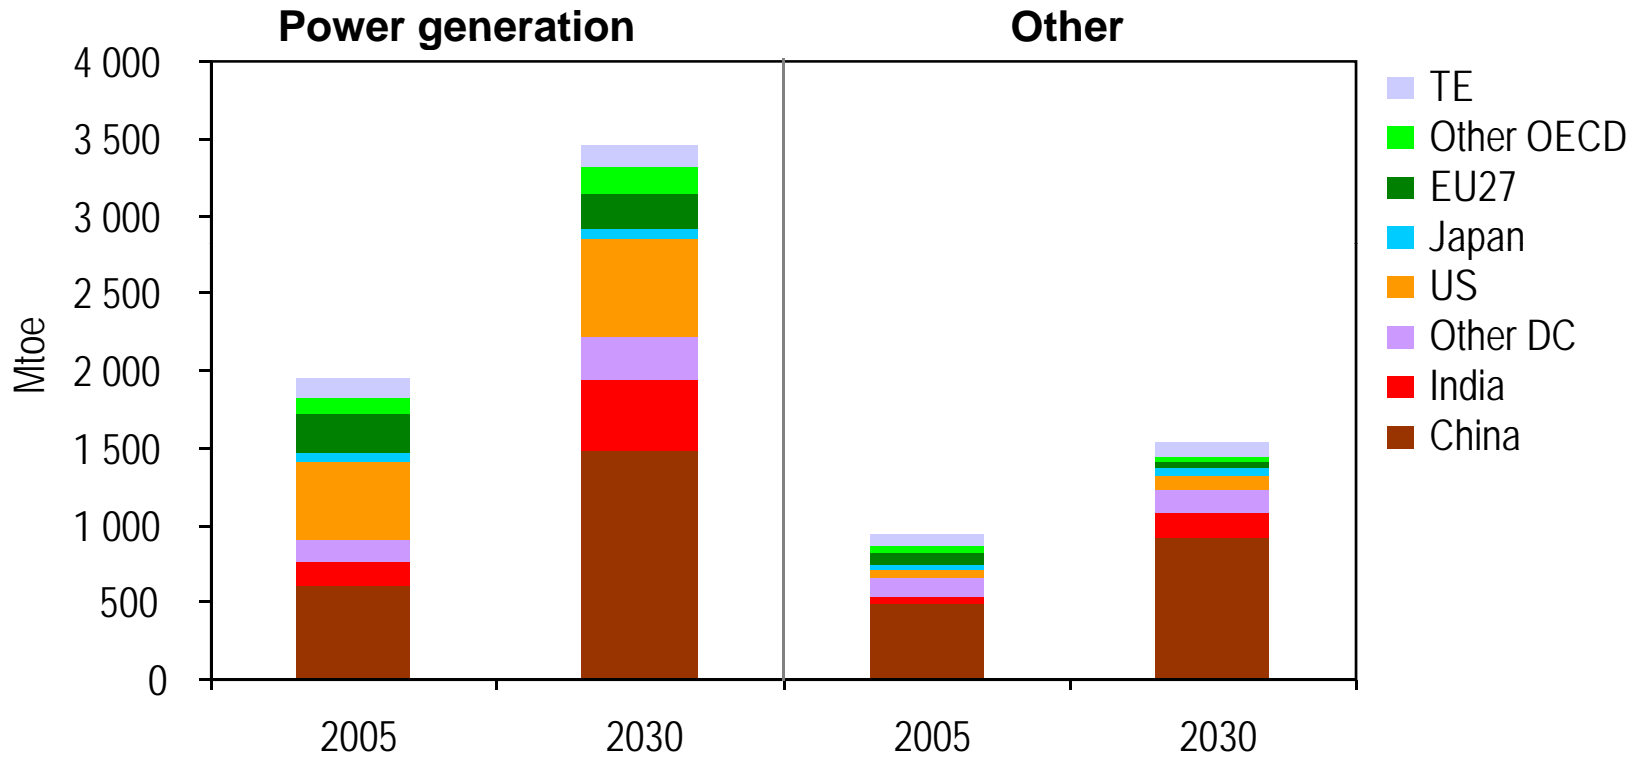

USD/MWh

© OECD/IEA
2008

Reference Scenario: Primary Coal Demand by Region (Mtoe)

China & India account for 78% of the growth of coal use in power generation and 91% of the growth in other sectors

© OECD/IEA
2008

Reference Scenario: Power Generation Capacity Additions in China, 2006-2030

***Capacity additions to 2030 In China exceed the
entire current installed capacity of the United States***

2008

Predominant investments in gas-fired power plants in OECD countries...

© OECD/IEA

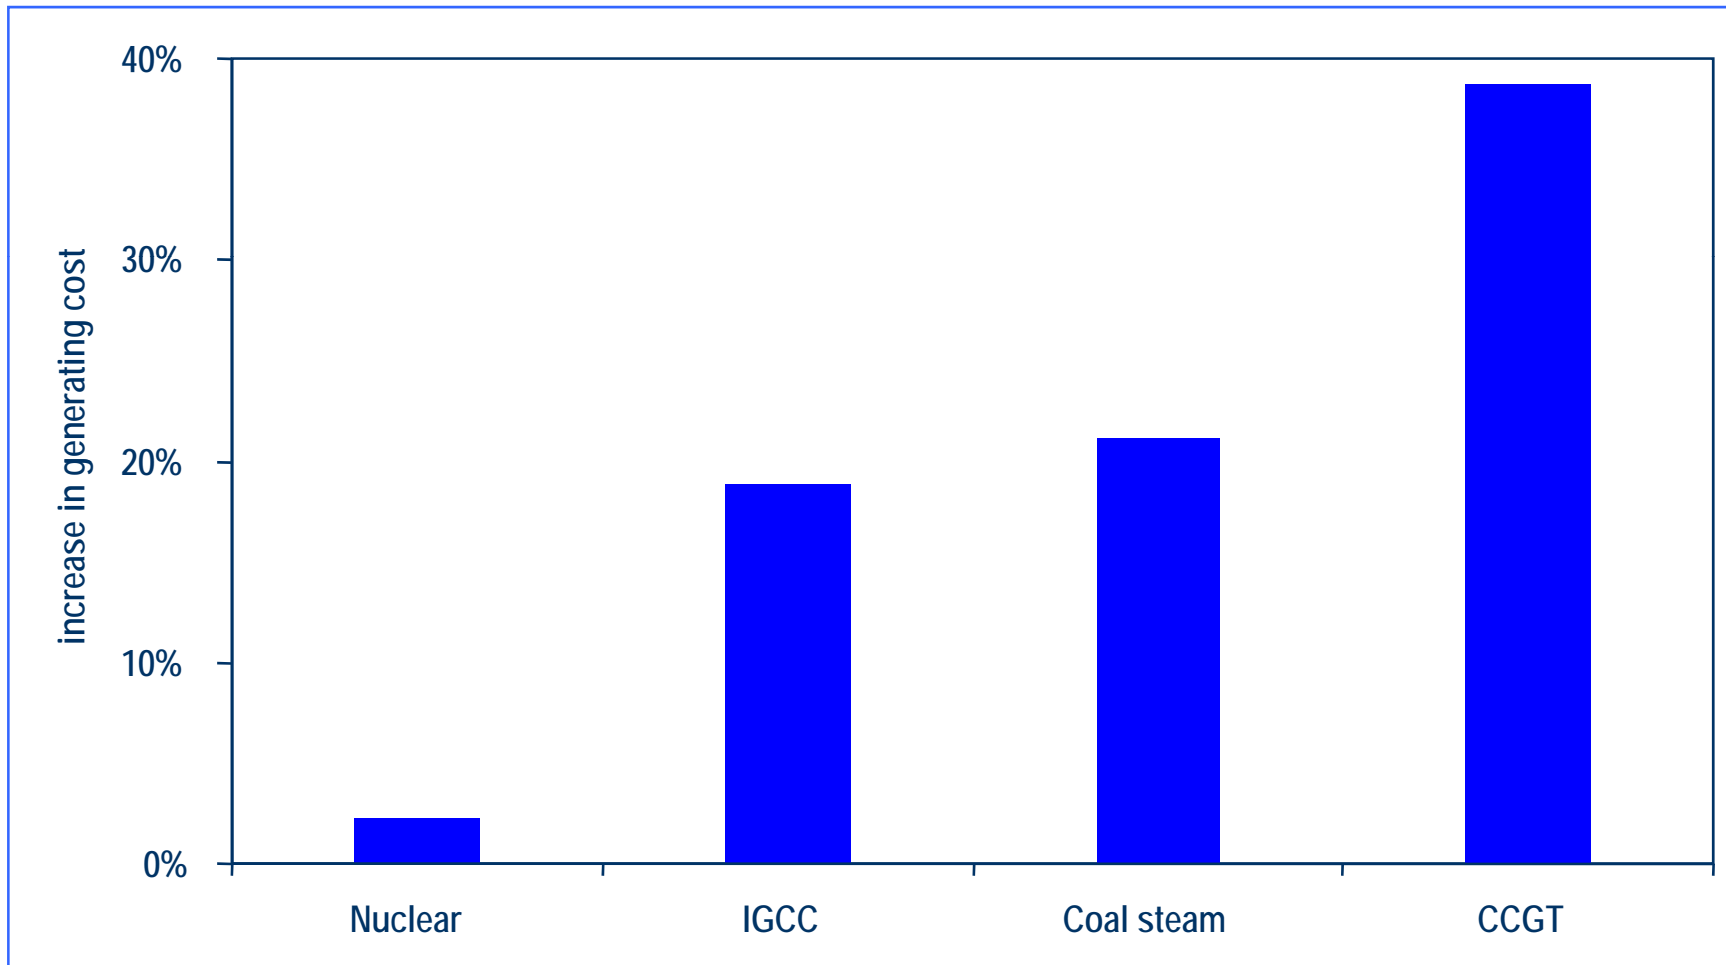

Risk and return assessment tends to favour investments in gas-fired power plants

Technology	Unit Size	Lead Time	Capital Cost/ kW	Operating Cost	Fuel Cost	CO ₂ Emissions	Regulatory Risk
CCGT	Medium	Short	Low	Low	High	Medium	Low
Coal	Large	Long	High	Medium	Medium	High	High
Nuclear	Very large	Long	High	Medium	Low	Nil	High
Hydro	Very large	Long	Very high	Very low	Nil	Nil	High
Wind	Small	Short	High	Very low	Nil	Nil	Medium

Impact of a 50% increase in fuel prices on generating costs

2008

Relative competitiveness of generation options changes at USD 10-20/t CO₂

USD/MWh

© OECD/IEA
2008

Key messages (1)

- **A key challenge for all countries today is to move to a more secure, competitive and clean energy system**

- **Deep emission cuts can be achieved, but require a global energy technology revolution**
 - **On supply AND demand sides**
 - **In developed AND developing countries**

- **Decarbonisation of the power sector is a top priority**
 - **Huge needs for capacity additions in the decades ahead**
 - **Today's investments will be "locked-in" for 40-50 years**

© OECD/IEA
2008

Key messages (2)

- **Base load supply provides significant potential for investments in cleaner and greener generation capacity**
 - Most electricity we use come from base load power plants
 - Renewables are becoming part of main stream generation
 - There are ways to reduce variability of wind power output

- **Markets provide signals for investment decisions**
 - Fuel prices affect relative competitiveness of generation options
 - Investors need credible, stable market-based mechanisms for clean technologies
 - A price on carbon helps to mitigate externalities

- **Regulatory uncertainties can be reduced by:**
 - Independence and transparency in regulation
 - Clear, stable and predictable frameworks
 - Efficient licensing process and timely project approvals
 - Early public participation in regulatory proceedings
 - Adequate resources and expertise
