

	<p>International Conference on</p> <h1>STANDBY POWER</h1> <p>India Habitat Centre, New Delhi, India.</p> <p>2-3 April 2008</p>	
---	---	---

The Indian Bureau of Energy Efficiency is pleased to host a two-day conference on Standby Power, organised in conjunction with the International Energy Agency.

Regular international conferences on Standby Power have helped to keep the issue at the forefront of national energy efficiency strategies and stimulate co-ordination amongst countries.

As a result, follow-up processes to the G8, APP, APEC and CSD Marrakech accord have all called on Governments to make a greater commitment to the IEA 1-Watt standby target and other programs to tackle standby power.

Since the last conference in Canberra in 2006, several major initiatives and policies have been launched - and new studies of standby power reveal whether progress is being made. The 2008 Conference, featuring a selection of speakers from around the world and from India, provides an opportunity to share information about:

- Asia-Pacific Partnership Projects underway to tackle standby power;
- National and International trends in standby power consumption;
- Proposals for policies to address Standby Power in India;
- Recent national policy developments and future proposals;
- Developments in the standby power test procedure, IEC 62301.

Participation is free but please book early, as there are a limited number of places available at the workshop.
