An efficient world strategy for 2040

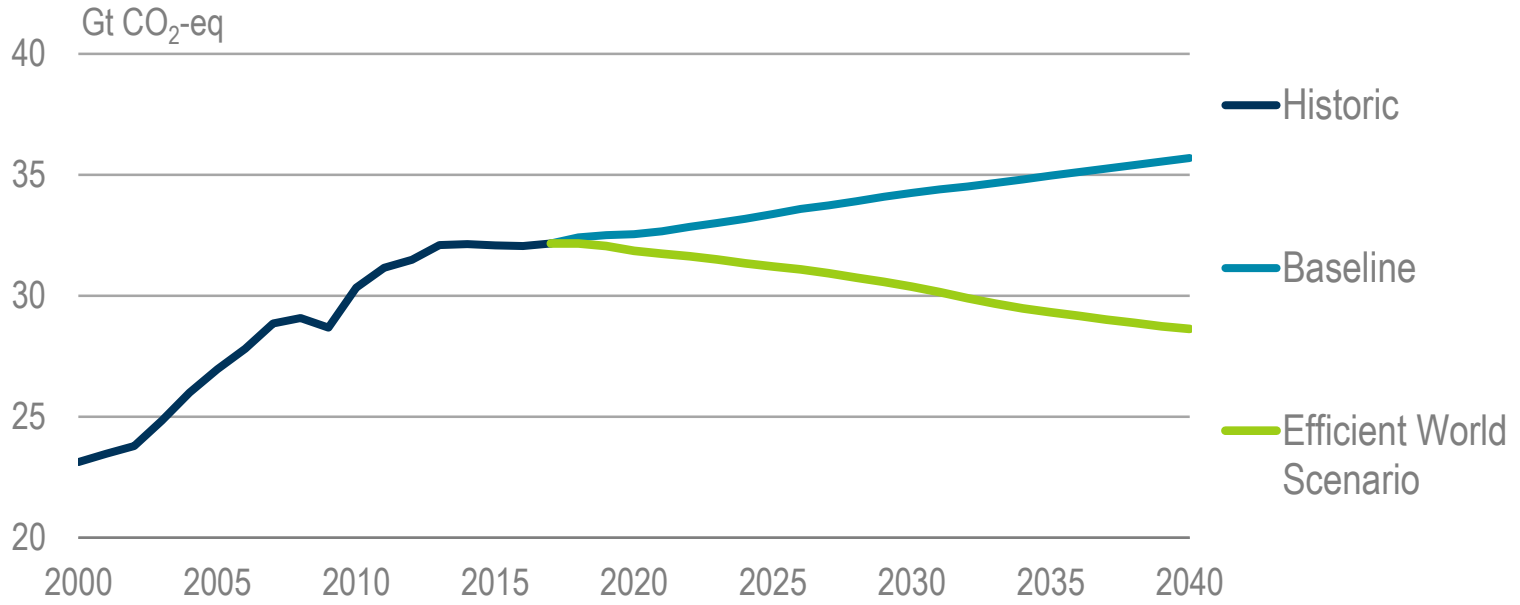

Transport		**Energy demand could stay flat, despite doubling activity levels.**
Buildings		**Building space could increase by 60% for no additional energy use.**
Industry		**Value-added per unit of energy could double.**

Capturing the benefits of energy efficiency

Greenhouse gas emissions in the New Policies Scenario and Efficient World Scenario, 2000-40 (right)

Global GDP could double between now and 2040 for only a marginal increase in energy demand. Global emissions could peak before 2020 and fall to levels 12% lower than today by 2040.
