Energy Efficiency Training Week: Lights & Appliances (Day 2)

1. **Where to start:** Planning Energy Efficiency Programmes
2. **Where to start:** Selecting Products for Standards and Labels
3. **Where to start:** Assessing current performance of appliances and equipment
4. **Toolkit: IEA** Indicators
5. **Key steps:** Industry transformation

Tuesday

==========

6. **Key steps:** Stakeholder involvement and communication
7. **Toolkit :** Insights into energy labels

SITE VISIT

Wednesday

==========

8. **What are the steps:** Use of ICT to make Programs smarter
9. **Did it work?** Tracking progress and assessing the multiple benefits
10. **Toolkit:** Monitoring, verification and enforcement (MV&E) of S&L
11. **Key learnings:** Best practice and further information

Thursday

Questions from Day 2?

- Any questions from Stakeholder Involvement and Communications?
- Any questions from labelling?

© OECD/IEA 2018

Manufacturer labels

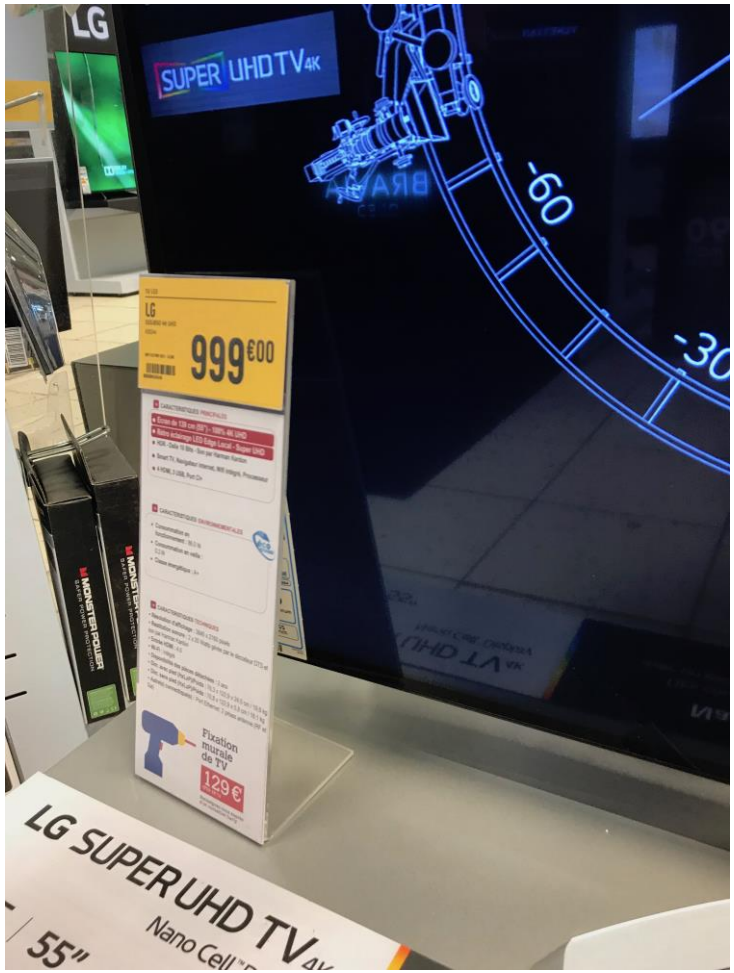

Might consumers consider these 'official' labels?

© OECD/IEA 2018

Visibility

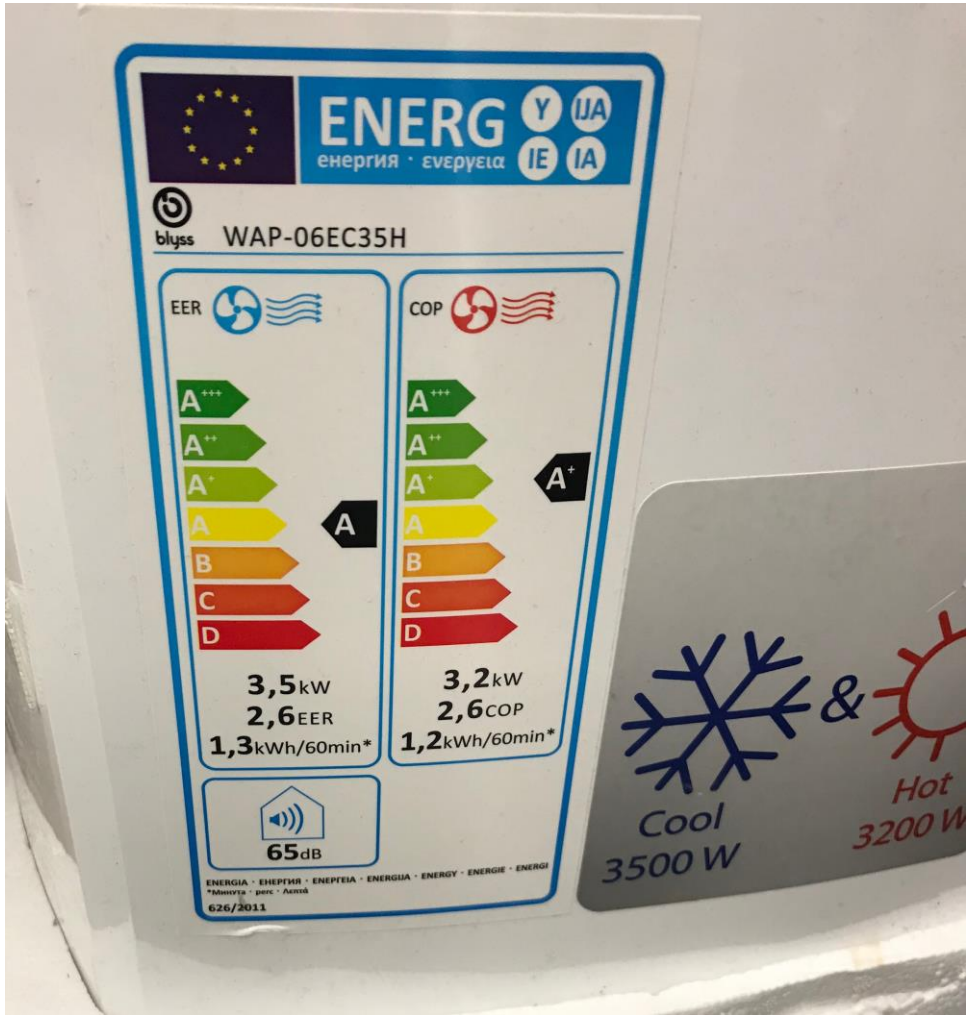

To work, labels need to be visible!

© OECD/IEA 2018

Useful consumer information!!!

© OECD/IEA 2018

Appliance and Equipment Store – some observations

- Labelling is quite complicated! Lots to think about if it is going to work well.
- Important to make sure obligations on SUPPLIER & RETAILER so that products display labels at point of sale.
- Are they easily understood for 'normal' consumers?
- Regulations need to include how labels are displayed:
  - Where they are placed on product and /or packaging
  - What other labels can be used in proximity
  - Do they have to be visible?
- Work best if a spread of ratings are available for consumers.
  - Label levels need to keep pace with technology improvements
